

RENTAL MARKET REPORT

Greater Toronto Area

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2010

Highlights

- The average vacancy rate for purpose-built apartment buildings in the GTA declined to 2.1 per cent in October 2010 from 3.1 per cent in October 2009. The average rent for two-bedroom apartments common to last year's survey increased by 1.8 per cent.
- Vacancies moved lower due to a slower outflow of renters into homeownership and a rising inflow of new renters from higher immigration and an improving job market.
- The vacancy rate will remain steady next year, slipping to 2.0 per cent as current trends impacting the rental market remain in place.

Figure 2

Rental Demand Rises

Much like the market for home sales, the rental market in the Greater Toronto Area (GTA) experienced significant change in 2010. The average vacancy rate for purpose-built rental apartments fell by a full percentage point to 2.1 per cent — erasing the rise in vacancy rates seen during 2009. Rental availability rates, which also include units for which the tenant has given notice to leave, moved lower by an equivalent amount to 3.9 per cent. The average increase in rents from a fixed sample¹ of units was slightly lower than growth in 2009 and on par with the rate of increase in 2008. Strong demand for renting this year led to a 30 per cent decline in the number of vacant units and, in the absence of any material change to the primary rental stock, produced some of the tightest conditions over the past 10 years. Several factors worked together to contribute to the sharp reduction in vacancies this year, including a rebound in employment, a high level of immigration, and the

rising cost of renting units in the condominium market. Yet perhaps the most influential underlying force was the marked slowdown in demand for buying homes.

Fewer first-time buyers

The number of vacant units reacts quickly to changes in MLS® sales. Since first-time buyers make up a

large share of sales activity, when sales slow, so does the outflow of renter households into ownership. Sales certainly slowed by the third quarter of this year as levels were nearly 30 per cent lower compared to last year. Many chose to speed up their purchasing decisions in anticipation of perceived changes to the market, leading to a new peak for sales in late 2009 and early 2010. Not surprisingly, the spring Rental Market Survey showed that vacancy rates were still trending higher earlier this year. The run-up in sales activity, however, meant that a lot of first-time buyer demand had been satisfied by the first quarter of 2010. Results from CMHC's spring Renovation and Home Purchase Survey revealed that eight per cent of the 600K-plus renters in the GTA intended on making a purchase during the remainder of 2010, down from 10 per cent at the same point in 2009. Therefore, the ensuing slowdown in sales during the summer removed much of the previous upward pressure on vacancies. By the fall, average vacancy rates had declined across the GTA, with rates staying highest in the

Figure 3

¹ Refer to page 68 for more details on fixed sample rent changes.

Figure 4

Durham Region, where the relative cost of ownership is the lowest. At the same time that fewer renters began leaving for the ownership market, growth in the number of new renters sped up, leading to an increase in net renter household formation.

Growth in employment and immigration

The growing size and level of employment of the 25 to 44 population (who make up about half of all renters) was a major contributor to the rise in demand for rentals. Population trends available at the provincial level for the first half of 2010 indicate that immigration is up 20 per cent compared to the first half of 2009, which builds off of the 80K-plus immigrants that arrived in the GTA last year. The majority of new immigrants are in the 25-44 age group and rent in their initial years after arriving. Furthermore, a greater share of new immigrants and others in their prime renting years have been able to land jobs this year. About half of the employment losses of 2009 amongst the 25-44 age group have been recouped so far in 2010 and the employment rate (share of the population that is employed) has risen back up to 80 per cent.

Although households under the age of 25 are most likely to rent (80 per cent do so), the number of renters in this age group represent only about five per cent of the total renter population and likely saw very little, if any, growth in 2010. The recession was particularly hard-hitting for the youth labour market and employment amongst young adults continues to trend down. As a result, demand for post-secondary education remains high, as evidenced by a large reduction in the average vacancy rate for bachelor suites, from 5.0 per cent to 2.3 per cent in 2010.

While job opportunities and a continued high level of immigration have ushered in more people to rental units, the fact that considerable slack remains in the labour market has also limited the number of vacancies. The outflow of renter households into homeownership has been restrained by the increased presence of underemployment. Much of this past year's rise in employment has been in temporary positions. As such, the ratio of part-time to full-time positions has trended higher during the recovery while the number of hours worked remains below pre-recession levels. This has flattened income growth for renters during a period that has seen housing prices continue to rise at their decade-average of six per cent per year. With rental affordability remaining unchanged, the result has been an improvement in the relative cost of renting versus owning in 2010. (For more on rental affordability, see sidebar discussion below.)

Relative cost of renting primary units improves

The growing gap between average rents charged for purpose-built units and those offered in the secondary

Figure 5

condominium market also likely played a role in holding down vacancies in the primary market. In 2009, the average one-bedroom condominium rented for 38 per cent more than the average one-bedroom unit in a primary building — in 2010 that difference grew to 46 per cent. In the absence of any real growth in income among younger households, the rising relative cost of renting a condo unit likely attracted a higher share of new renters to the primary market and slowed the flow of “move-up” renters into the condo market. (For more on the condominium rental market, please refer to the Secondary Rental Market section). Those looking for a relatively higher end rental unit appeared to have stayed within the primary market, as units priced above \$1,200/month recorded the largest decline in vacancy rates.

Rental Market Outlook for 2011

The big swings in rental market conditions experienced over the past three years are expected to subside next year. The average vacancy rate for purpose-built structures will remain virtually unchanged, edging down slightly to 2 per cent even. A continuation of relatively tight rental market conditions and low rental mobility will push average rents up by about one per cent.

The recent trend towards a slower outflow of households from rental units to homeownership will persist in 2011 as the expanded gap between the costs of owning and renting continues to hold back demand from first-time buyers. All key variables that dictate relative affordability — prices, interest rates, incomes and rents — are expected to see very little change from today's levels and thus fail to present any compelling

evidence for a shift in behaviour. In light of the recent volatility in the ownership market, many renters will wait for conditions to stabilize for some time before making their first purchase. At the same time, new households will continue to flow into rental accommodations and also keep downward pressure on vacancies. Immigration will trend higher as households from around the world look for opportunities in Canada, which is expected to lead economic growth among major industrialized countries for the second straight year according to the IMF. Furthermore, more entry-level positions will be created as business investment picks up, leading to higher levels of employment among younger workers and the formation of more renter households.

It is expected that an increasing supply of condominium rentals will have some effect on vacancies in the primary market, but not enough to push the average vacancy rate higher. A high level of completions is likely in store for next year and many units will end up in the rental condominium

universe, creating more options for renters. However, the widened gap between rents in the primary market and those in the condo market is expected to remain. This will limit the drawing power of condo rentals for the average renter in an economy still in recovery. More completed units will also mean that more households will make the move into their first home. Yet, the past relationship between condo completions and primary rental vacancies doesn't reveal a strong link, which suggests that many end-users do not come from the primary market.

Secondary Rental Market

Vacancy rates up for condo rentals

The average vacancy rate for condominium apartments in the GTA increased to 1.6 per cent in 2010 — double the rate registered a year ago and the highest level recorded since CMHC began its survey of the condominium rental market in 1993. It is important to note, however, that the vacancy rate for condo rentals still

CMHC's rental affordability index measures estimated renter household income against the level of income required to rent a median-priced two-bedroom apartment (for more on the methodology, please see the Definitions section at the end of the report). According to the indicator for the Toronto

CMA, rental affordability remained the same in 2010 — signalling that renter incomes grew in line with rents last year. The current index level indicates that rental affordability is at its highest point since the early part of the last decade.

Figure 6

Figure 7

remains low by any measure and below that of the primary rental market. Both demand and supply factors pushed up the vacancy rate last year.

Higher rents a deterrent last year

On the demand side, the abovementioned smaller inflow of renters from the primary market played a role, as did a preference among many condo dwellers to buy instead of rent due to stronger growth in the cost of renting compared to mortgage carry costs. With a 10 per cent down payment and using discounted five-year fixed mortgage rates, the average mortgage carrying cost on a condominium is currently equivalent to the average rent. This especially impacted demand for condo rentals in the central part of the city, which saw average vacancy rates rise above two per cent for the first time. Meanwhile, less expensive rentals in the quickly expanding Peel condo market maintained an average vacancy rate of less than half of a percentage point.

The introduction of the HST is likely a factor that contributed to the sizeable increase in condo rents despite rising vacancy rates.

The harmonized tax is applied to certain maintenance costs such as electricity, heating, lawn care, snow removal, and service calls, which led to a rise in condo fees. According to Urbanation Inc., average condominium maintenance fees in the third quarter were up 8 per cent year-over-year. It appears that at least some of this added cost was passed on to renters. The rise in condo rents was also likely motivated by the previous span of six years during which the average vacancy rate remained below one per cent. Furthermore, the new units entering the rental pool over

the past year were either recently purchased for higher prices compared to previous years or bought at pre-construction in the middle part of the past decade when price growth began accelerating. This suggests that rising rent levels are also reflection of increasing purchase prices.

Recent rise in completions adding supply

The share of rental units in the condominium apartment universe slipped in 2010 as growth in rental supply slowed to just one per cent. Many condo owners were enticed by the recent strength in prices to sell their units during the year. Research conducted by CMHC indicates that approximately 30 per cent of the units registered over the past year were listed for sale. On the surface, fewer units added to the rental stock would seem to help push vacancy rates down. However, a surge of nearly 8,000 condominium apartments were completed in the June to September 2010 period. These new units likely worked to push vacancies higher, even though they were not captured by the survey (the survey includes all structures registered by June).

Figure 8

Figure 9

As the occupancy period for many new buildings began, many renters began vacating their units to move into their newly finished suites. As well, many units were likely listed for rent as projects came to completion, drawing attention away from the existing stock. Survey results indicate that approximately one quarter of new condos registered enter into the rental pool.

Condo rental market tightening

Despite the annual increase in condo vacancies and added rental listings over the past few months, data from the Toronto Real Estate Board's latest MLS Rental Market Report indicates that the market for condo rentals is tightening. During the May to August period, the ratio of rented to listed condo apartments was 63 per cent —

up from 59 per cent during the same period a year ago. This suggests that average vacancy rates aren't facing further upward pressure.

More households living in other secondary rental units

CMHC's Secondary Rental Market Survey also covers rental units in single-detached, semi-detached, townhouses, duplexes and accessory suites. Nearly 150,000 households were estimated to be living these secondary units at the time of the survey — three times the number living in condominium apartment rentals and representing 30 per cent of the entire rental market universe in the Toronto CMA. Following a reduction in the number of units and average rents in 2009, the low rise secondary rental market saw an increase in tenants and rent levels in 2010. With rent levels comparable to those charged in the primary market, low vacancy rates created a spill over of renters seeking affordable accommodations into secondary housing types.

National Vacancy Rate Decreased in October 2010

The average rental apartment vacancy rate in Canada's 35 major centres decreased to 2.6 per cent in October 2010 from 2.8 in October 2009.

Immigration continues to be a strong driver in increasing rental housing demand. Recent immigrants tend to rent first before becoming homeowners. Also, improving economic conditions have likely boosted the demand for rental housing, thus pushing vacancy rates downward. Moderating this, however, is lower levels of youth employment, which likely reduced household formation among young adults (under 24 years of age) who are predominantly renters.

The Canadian average two-bedroom rent in new and existing structures was \$860 in 2010 compared to \$836 in 2009. With respect to the CMAs, the highest average monthly rents for two-bedroom apartments in new and existing structures in Canada's major centres were in Vancouver (\$1,195), Toronto (\$1,123), Calgary (\$1,069), Ottawa-Gatineau (Ontario Part \$1,048), Victoria (\$1,024), and Edmonton (\$1,015). These are the only major centres with average rents at or above \$1,000 per month. The lowest average monthly rents for two-bedroom apartments were in Trois-Rivières (\$533), Saguenay (\$535) and Sherbrooke (\$566).

Provincially, the highest average monthly rents were in Alberta (\$1,036), British Columbia (\$1,019) and Ontario (\$980), while the lowest monthly rents were in Québec (\$666), Newfoundland and Labrador, and New Brunswick (both \$668).

Year-over-year comparison of average rents can be slightly misleading because rents in newly built structures tend to be higher than in existing buildings. By excluding new structures, we can get a better indication of actual rent increases paid by tenants. The average rent for two-bedroom apartments in existing structures across Canada's 35 major centres increased 2.4 per cent between October 2009 and October 2010, a similar pace of rent increase to what was observed between October 2008 and October 2009 (2.3 per cent). The major centres with the largest increases in average rent were St. John's (8.9 per cent), Regina (6.3 per cent) and Winnipeg (4.5 per cent). These increases reflect the tight rental market conditions prevailing in these CMAs. Average rents in existing structures decreased in Calgary (-2.7 per cent), and Windsor (-0.4 per cent).

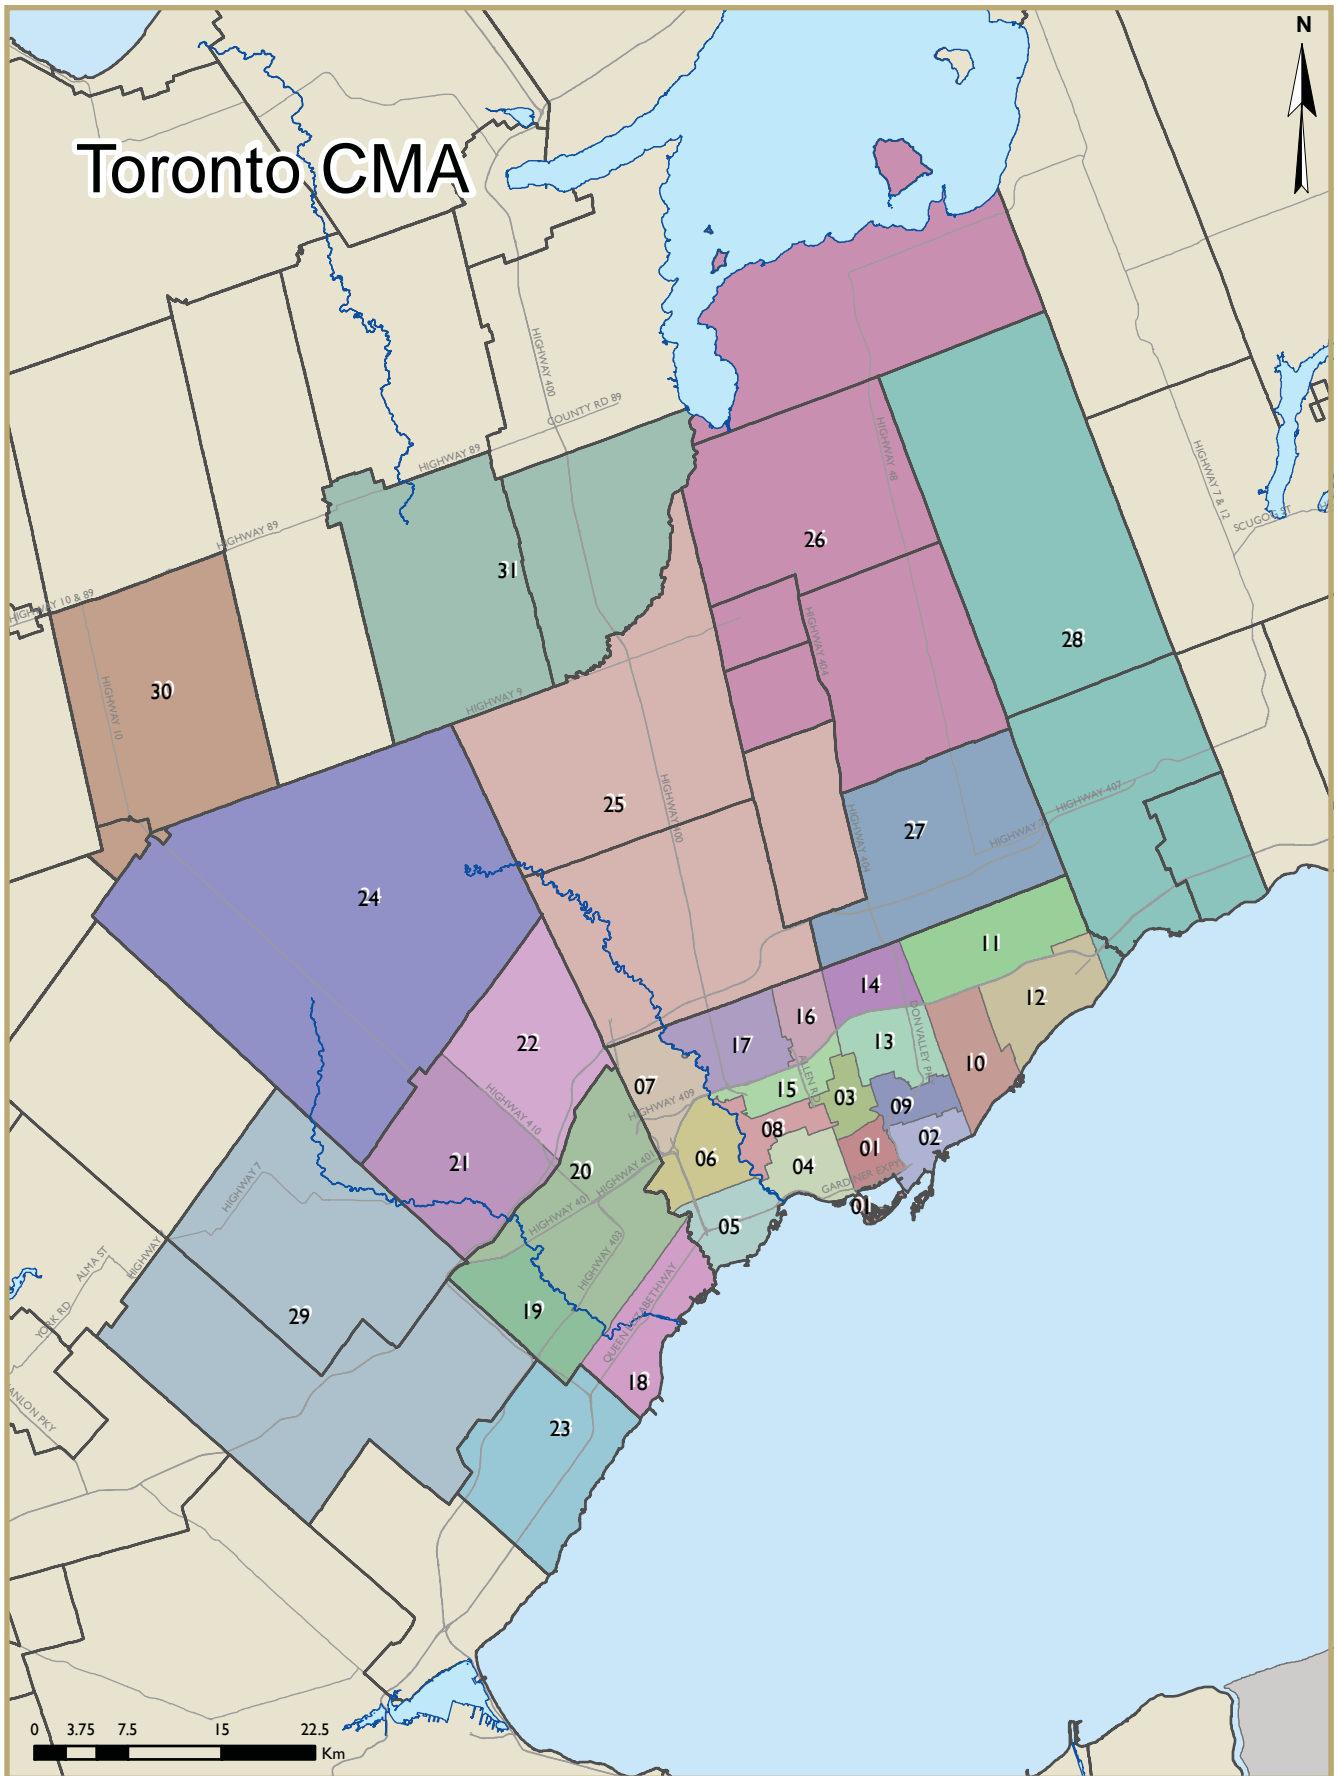

CMHC's October 2010 Rental Market Survey also covers condominium apartments offered for rent in Calgary, Edmonton, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, and Victoria. Vacancy rates for rental condominium apartments were 2.0 per cent or below in 6 of the 10 centres surveyed. Rental condominium vacancy rates were the lowest in Saskatoon (0.9 per cent), Regina (1.4 per cent) and Victoria (1.6 per cent). The highest vacancy rates for rental condominium apartments occurred in Edmonton (5.2 per cent), Calgary (5.2 per cent) and Montréal (4.2 per cent). The highest average monthly rents for two-bedroom condominium apartments were in

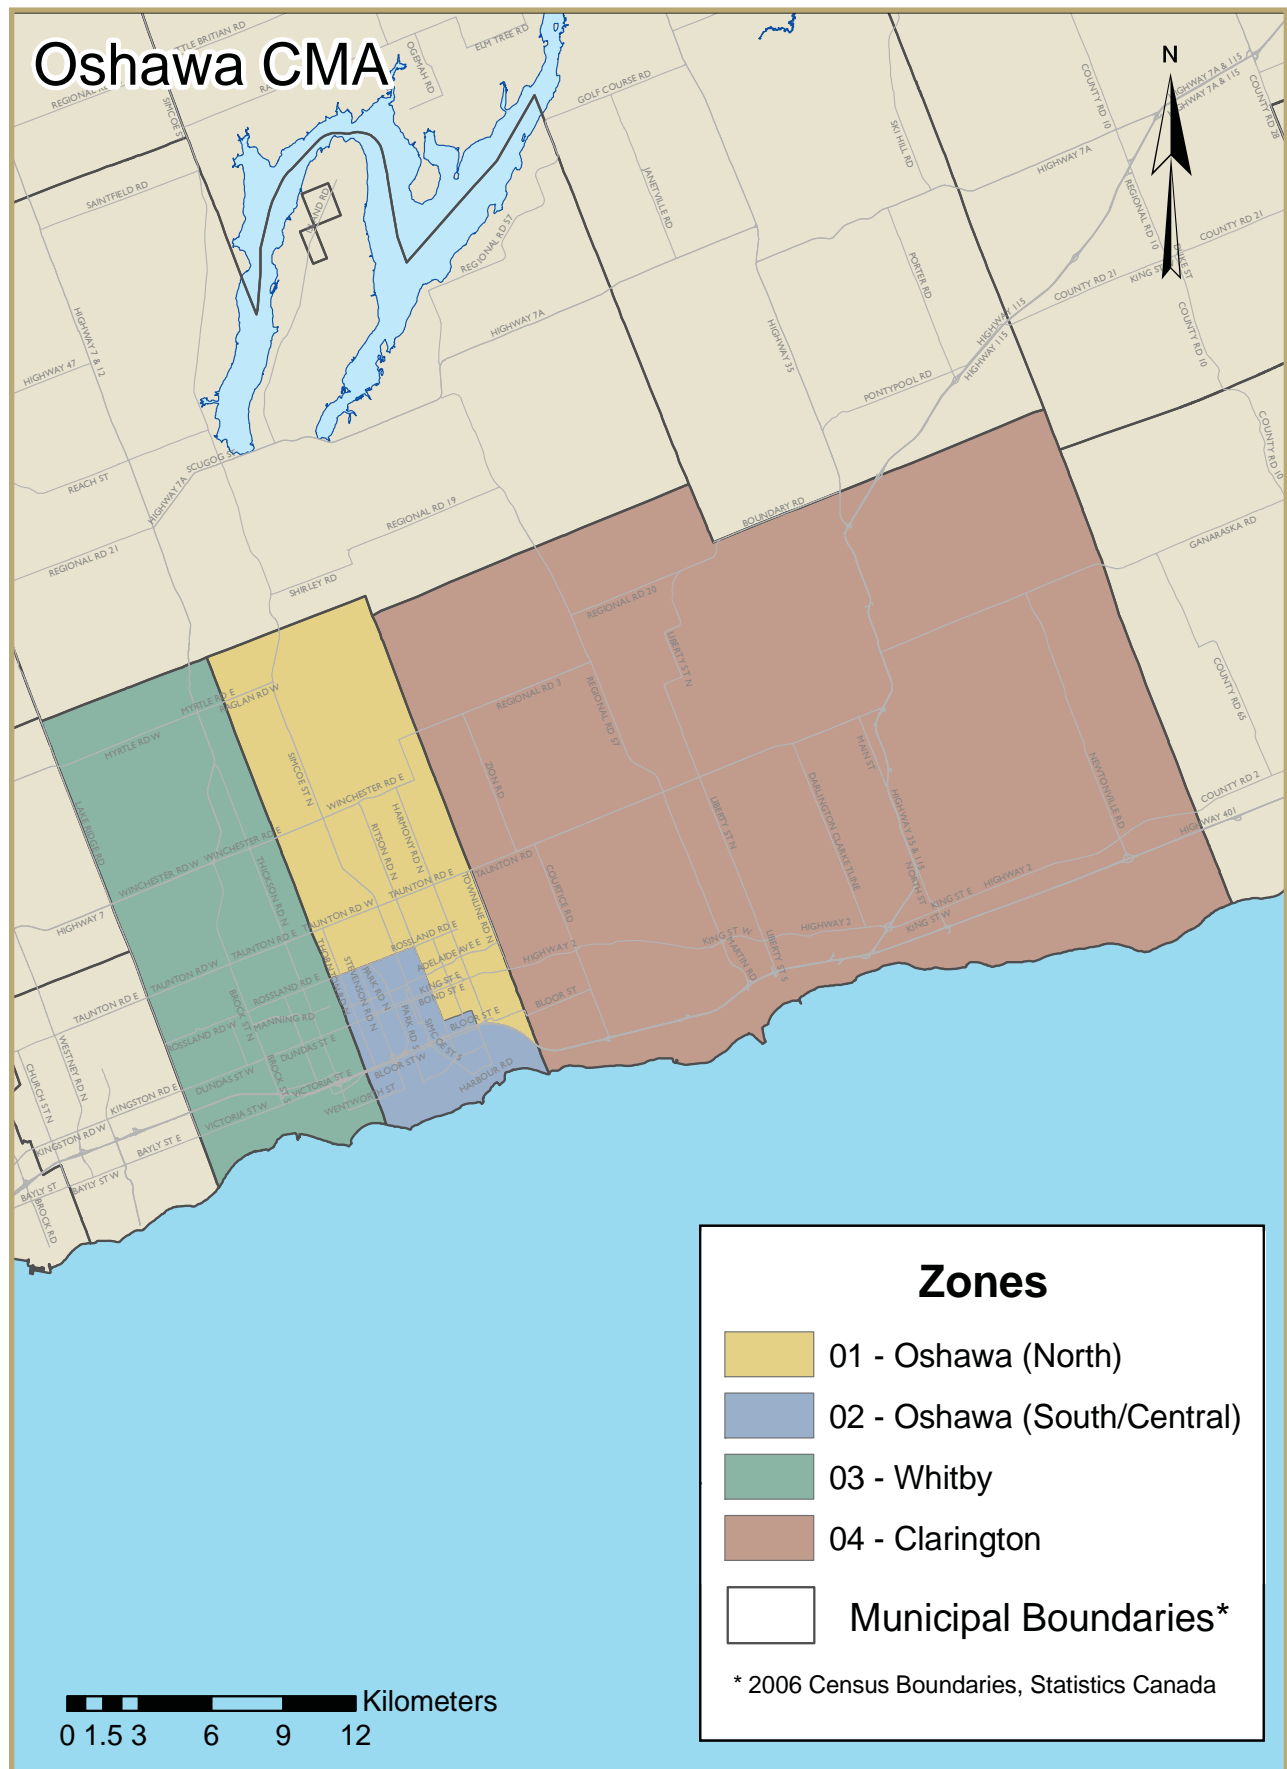

Vancouver (\$1,610), Toronto (\$1,590), Calgary (\$1,385) and Ottawa-Gatineau (Ontario part, \$1,212). All surveyed centres posted average monthly rents for two-bedroom condominium apartments that were higher than average monthly rents for two-bedroom private apartments in the conventional rental market.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current October Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC has introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a new rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. The level of income required for a household to rent a median priced two-bedroom apartment, using 30 per cent of its income, is calculated. The three-year moving average of median income of renters' households in a centre is then divided by this required income. The resulting number is then multiplied by 100 to form the indicator. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2005. CMHC has developed forecasts of median renter household income since 2006.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
