HOUSING MARKET INFORMATION

RENTAL MARKET REPORT

Ottawa¹

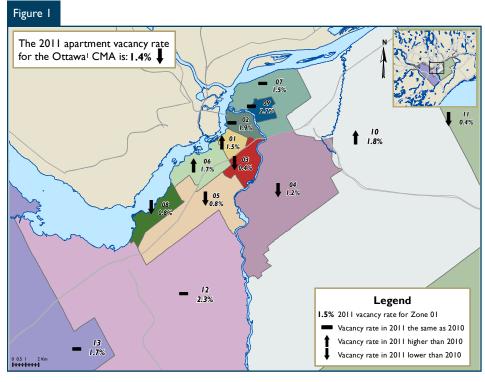

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2011

Highlights

- Ottawa's apartment vacancy rate declined to 1.4 per cent in 2011, partly as a result of less first-time homebuyer activity and healthy migratory inflows.
- Strong rental demand pushed up the average fixed sample rent for two bedroom apartments by 2.3 percent.
- Increased rental market activity within Ottawa's condominium apartment sector and demand for smaller secondary suites cushioned the tightening trend within the purpose-built rental market.
- Continued net in-migration, modest job and income gains, and moderating homeownership demand will tighten rental market conditions further in 2012.

Rental Market Overview

According to the rental market survey conducted in October 2011 by Canada Mortgage and Housing Corporation (CMHC), all major centres in Ontario except Kingston experienced declines in rental vacancies. Sitting at 1.4 per cent, Ottawa tied Toronto with the third lowest vacancy rate in the province, lagging only Kingston and Guelph (both at 1.1 per cent). On a national level, Ottawa lagged only 5 other cities and was in the top quintile of low vacancies.

Factors Supporting Downward Pressure on Vacancies

Subsiding pace of first-time homebuyer activity

Several factors have combined to strengthen rental demand in Ottawa during 2011. Historically low mortgage rates continue to support demand for owner-occupied housing. However, the pace of first-time homebuyer activity is subsiding due to higher average price. In fact, the average resale condominium apartment price is currently hovering around the \$290,000 mark and commanding a monthly mortgage carrying cost, not including condo fees, upward of \$1,450. Since the average twobedroom rent for privately initiated apartment units remained 25 per cent more affordable, some young households are remaining in rental accommodation longer.

Secondly, Ottawa households are facing emerging headwinds. Economic uncertainty is encouraging more risk averse behaviour and dampening more expensive big ticket spending such as ownership housing. In fact, overall full-time jobs have posted only modest gains so far this year, with workers aged 25 to 44 years old underperforming other age groups. Therefore, while first-time ownership demand eased off, rental demand remained strong.

Growing migratory inflows into Canada's capital

Another major factor supporting strong rental demand has been the sustained increase in net in-migration in Canada's Capital. Following the aftermath of the tech sector bust, migratory inflows declined significantly, reaching a low in 2004. Subsequently, the trend reversed and migration into Ottawa has since then emerged on a noteworthy rising trend, with a greater than average proportion of highly skilled economic immigrants.

High in-migration spells good news not only for Ottawa's economic and demographic health, but also for landlords' ability to attain high occupancy levels. Recent research suggests that the great majority of newcomers tend to rent on arrival and it usually takes them an average of four years for homeownership to be within reach.

Therefore, population and household formation growth continue to be well supported, with a net of almost 12,000 migrants calling Ottawa their new home during 2010.As CMHC expects the number of migrants coming to Ottawa to hover around the 10,000 mark for this year, the pipeline of arrivals remains healthy and supportive of rental demand.

Youth employment supporting vacancy rates at lower-end of market

Younger adults aged 15 to 24 years have contributed to maintaining tight

rental market conditions in Ottawa. Although many of these younger adults may be staying in the parental home longer, job gains among them encouraged new household formation growth. Even though these young workers have not yet recovered all the job losses from the recent economic downturn, the tide has been slowly turning upwards so far this year.

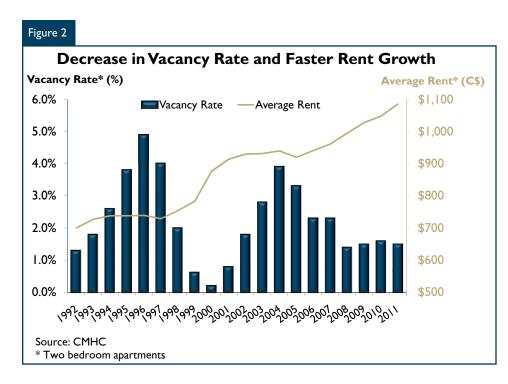

New household formation translates into increase rental demand, which cascades into improved occupancy rates. These rates were highest for apartments units located in the more accessible neighbourhoods surrounding the Downtown core, especially for bachelor units, suggestive of increased activity coming from these young renters aged 15 to 24 years old.

Factors Adding Upward Pressure on Vacancies

Growing popularity of rental condos

The rise in popularity of the condominium apartment rental sector is increasingly being felt in Ottawa, as this segment is in close competition with both the purpose-built rental market and the homeownership market. For the second year in a row, most of the net rental demand growth was absorbed by condo rental units. This in turn dampened the effects on the purpose-built rental vacancy rate decline. In fact, both condo rental demand and supply grew at doubledigit annual pace, with demand actually outperforming. Strong and widespread demand growth therefore pushed the vacancy rate for condo apartments down from 2 per cent to 1.4 per cent.

As the number of condominiums in Ottawa continued to mount, the number of investor-held units for

rent increased to over 5.000 units. Condo investment activity continued to be sustained by an environment of condo resale price appreciation. These dwellings post a favourable outlook when compared to the emerging volatility in other investment options and are strongly supported by socioeconomic and demographic fundamentals and low vacancy rates.

The trend in renters' preferences is by now relatively well established in favour of newer, pricier units in larger structures and close proximity to community amenities as well as the dynamic lifestyle offered by Ottawa's core. Condo rentals score high on most counts and this has led to an active investor presence in new condo construction projects around town.As well, investors are taking advantage of low mortgage rates.

Secondary rental market buffering the impact of rental demand growth

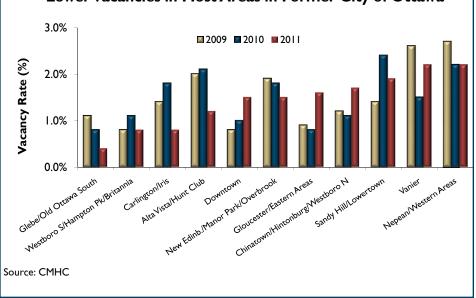

According to the CMHC rental market survey, about a third of the total supply of rental accommodations comes from the secondary rental market – a market generally comprised by bigger rental dwellings. This type of rental accommodation provides a relatively affordable alternative to those renters who prefer the lifestyle offered by larger single- and semi-detached homes,

townhomes, duplexes and the like, but who lack the financial means to become homeowners. As a result. some of the impact of the potential movement into the ownership market is absorbed by the secondary rental market.

CMHC's survey of secondary rental units indicated that although overall demand within this market remained essentially unchanged, demand for the larger, more expensive types of accommodations such as single- and semi-detached homes and townhomes declined by almost 8 per cent. This result seems to suggest that some of these renters may have been able to take advantage of low mortgage rates to become first-time homebuyers.

At the same time, demand for less expensive accessory suites, such as basements and in-law suites, rose strongly from last year. This result suggests that the smaller secondary suites market may have absorbed some of the increased rental demand at the lower-end of the market. This demand would have otherwise

Figure 3

been felt in the purpose-built rental apartment market, thus serving as a buffer that prevented a more significant decline in the headline vacancy rate.

Ottawa's rent rises above guideline

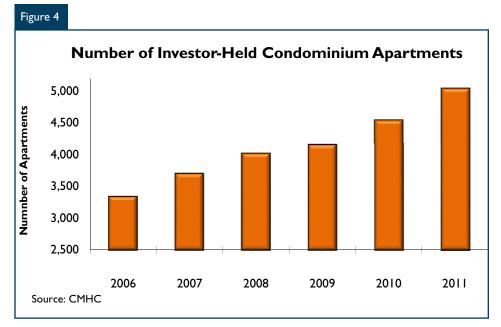

With Ottawa's availability rate hovering above 3 per cent, this indicates that movements from rental to ownership, although moderating, still remained active. As a result, the turn-over rate in the rental apartment market rose. Since the rent increase Guideline is applicable only to current tenants, a rising turn-over rate tends to apply upward pressure on fixedsample rents. This resulted in growth of fixed sample rent of 2.3 per cent, over and above the Rent Guideline of 0.7 per cent for 2011 in Ontario. In fact, the highest fixed sample rent growth was observed among onebedroom units, especially among those located in areas within the former City of Ottawa.

Sub-Market Analysis

Lower vacancies and availability in hubs surrounding downtown

Ottawa's increasingly popular rental market zones which comprise most of the former City of Ottawa surrounding the less affordable Downtown core area, experienced the most marked tightening of rental conditions among most apartment sizes compared to last year. Accordingly, vacancy rates declined due to positive net demand growth in all of these zones except in New Edinburg/Manor Park/Overbrook, where the universe supply declined proportionally more than net demand.

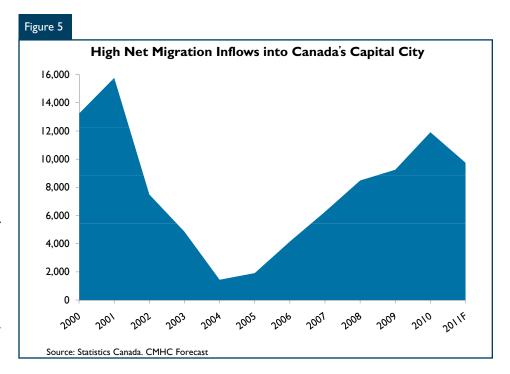

Strong rental demand within these

areas also pushed availability rates slightly lower. The availability rate is a broader indicator than the vacancy rate as it captures both current vacant stock and stock that may become vacant over the next few months where the tenant has either been given or has provided notice to vacate the unit. In the Ottawa CMA, the availability rate decreased for a second consecutive year to 3.2 per cent, led by one-bedroom apartment units and decreases witnessed in the abovementioned areas plus Nepean.

Rental Affordability Indicator

The rental affordability indicator is a gauge of how affordable the rental

market is for renter households. In general, as the indicator increases, the market becomes more affordable. According to CMHC's rental affordability indicator, affordability in Ottawa's rental market increased. Improved affordability was the result of a faster growth in the level of household income when compared to level of rents.

2012 Rental Market Outlook

Going forward, vacancy rates are expected to fall to 1.2 per cent in 2012, the lowest rate since 2001, as Ottawa will continue to experience positive migration inflows and a moderating pace of homeownership demand. Growing labour market uncertainty, especially among public sector workers, will likely have a dampening effect on ownership demand next year and keep the rental market tight. As well, Ottawa's pace of job gains is expected to strengthen only slightly in 2012, while average labour earnings growth will stay positive but modest.

The lack of growth in the purposebuilt rental apartment stock will in turn continue to encourage investor activity within the condominium rental market next year. With both new purpose-built rental apartment units completed and currently under construction running at just over 100 units, and new starts so far this year totalling only 12 units, the condominium sector will be the major source of new rental supply next year.

Given high rental demand and moderate rental supply in the coming year, Ottawa's rents will grow at a faster rate than in 2011. The rent review guideline will increase to 3.1 per cent in 2012 which will support CMHC's average rent for a twobedroom apartment forecast to surpass the \$1,120 mark next year and remain one of the highest in the country.

National Vacancy Rate Decreased in October 2011

The average rental apartment vacancy rate in Canada's 35 major centres¹ decreased to 2.2 per cent in October 2011 from 2.6 in October 2010. Immigration and increased employment in the under 25 years age group have been factors supporting demand for rental units.

The major centres with the lowest vacancy rates in October 2011 were Regina, (0.6 per cent), Winnipeg, Kingston and Guelph (1.1 per cent), and St. John's (1.3 per cent). The major centres with the highest vacancy rates were Windsor (8.1 per cent), Abbotsford (6.7 per cent), Saint John (5.9 per cent), Sherbrooke (4.7 per cent), and Moncton (4.3 per cent).

The Canadian average two-bedroom rent was up from \$860 in October 2010 to \$883 in October 2011. With respect to the CMAs, the highest average monthly rents for twobedroom apartments in new and existing structures in Canada's major centres were in Vancouver (\$1,237), Toronto (\$1,149), Ottawa (\$1,086), Calgary (\$1,084), Victoria (\$1,045), Edmonton (\$1,034) and Barrie (\$1,001). The lowest average monthly rents for two-bedroom apartments were in Trois-Rivières (\$547), Saguenay (\$557), and Sherbrooke (\$577).

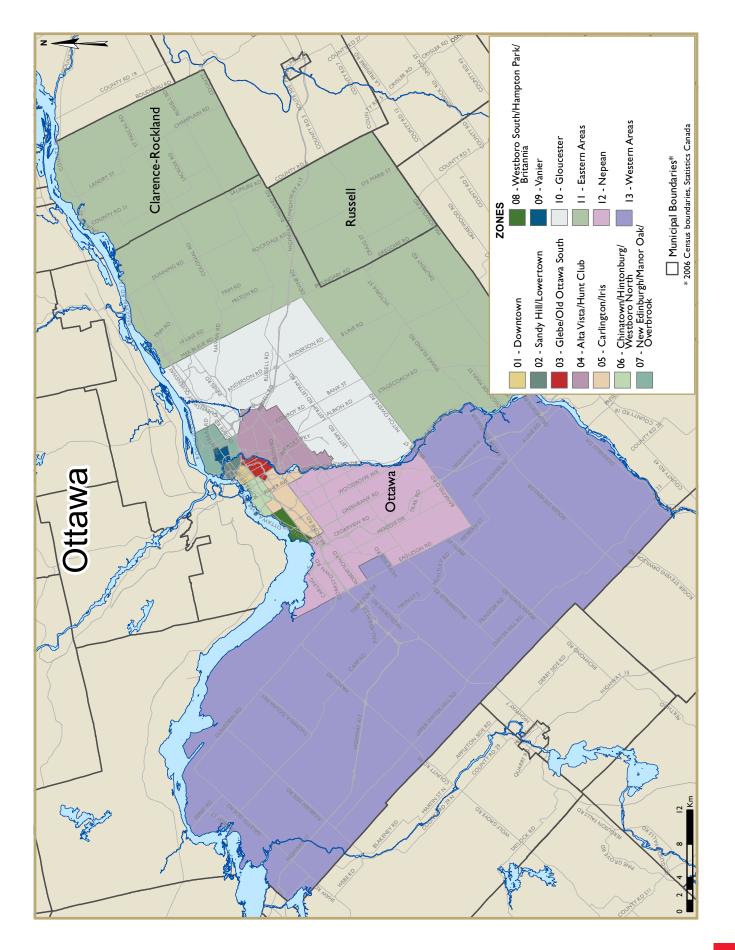

Overall, the average rent for twobedroom apartments in existing structures across Canada's 35 major centres increased 2.2 per cent between October 2010 and October 2011, a similar pace of rent increase to what was observed between October 2009 and October 2010 (2.4 per cent) and roughly in line with inflation (2.9 per cent).

CMHC's October 2011 Rental Market Survey also covers condominium apartments offered for rent in Victoria, Vancouver, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal, and Québec. Vacancy rates for rental condominium apartments were 2.0 per cent or below in 7 of the 11 centres surveyed. Rental condominium vacancy rates were the lowest in Saskatoon (0.4 per cent), Regina (0.6 per cent), and Vancouver (0.9 per cent). The highest vacancy rates for rental condominium apartments occurred in Calgary (5.7 per cent), Edmonton (3.7 per cent), and Montréal (2.8 per cent).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b-Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0). n/u: No units exist in the universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

** Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights , Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e., one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montréal, Ottawa, Québec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. A centre's median income is divided by the level of income required for a household to rent a median priced two-bedroom apartment using 30 per cent of income. The result is then multiplied by 100. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable. For years for which the median income is not available, CMHC has developed forecasts.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2009. CMHC has developed forecasts of median renter household income for 2010 and 2011. It should be noted that nominal values for both median rent and median incomes have been used to calculate the rental affordability indicator.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
