

# RENTAL MARKET REPORT

## Ontario Highlights\*

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2011

Figure 1

### Highlights

- Vacancy rates dropped in most urban centres
- Notable factors exerting downward pressure on vacancy rates include: rising economic uncertainty, improving economic conditions for Ontario residents under the age of 25 and declining first time buyer demand
- Notable factors exerting upward pressure on vacancy rates includes: weaker migratory inflows into Ontario and increasing rental supply pressures
- Fixed sample 2-bed apartment rents grew at a rate of 1.8 per cent in the fall of 2011 - outpacing rent review guideline increases

Figure 2

\*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAAs.

## Ontario Rental Vacancy Rates Move Lower In October 2011

According to Canada Mortgage and Housing Corporation's (CMHC) Fall 2011 Rental Market Survey, Ontario vacancy rates<sup>1</sup> declined to 2.2 per cent in October 2011, down from 2.9 per cent in the fall of 2010. Vacancy rates moved lower for all bedroom types particularly less expensive units in Ontario's most expensive markets. Most urban centres registered lower vacancy rates. The lowest vacancy rates among major centres were in Eastern Ontario while the highest vacancy rates were in south western Ontario major centres.

### Factors exerting downward pressure on vacancy rates

A number of factors exerted downward pressure on vacancy rates. A sluggish US economic recovery coupled with concerns about the debt crisis in Europe generated a cloud of uncertainty over financial markets. Rising global economic uncertainty encouraged more risk averse behaviour among potential housing consumers. This defensive behaviour spilled into the Ontario real economy and housing markets with more households postponing big ticket purchases by the third quarter of 2011. Consequently, tenants considering the jump to more expensive ownership housing likely postponed this decision.

A second factor supporting rental demand was the state of homeownership demand among first

time buyers aged 25 to 44. Some prospective renter households took advantage of lower prices and low interest rates in recent years and bought for the first time. However, potential first time buyers in these age brackets experienced no real income and job growth since the fall of 2010. Furthermore, sharp increases in home prices since last fall increased the relative cost of owning versus renting. These factors worked together to discourage the shift from renting to owning in the past year.

A third factor exerting upward pressure on rental demand was employment trends in the youth labour market. This group comprises the echo boom cohort or the children of the young baby boomers born in the early 1960s. The echo boom was the last spike in birth rates (1980 – 1995) following the baby boom era. For most of the past decade, young adults have been living home longer. Few job opportunities delayed household formation and their departure from the family home. Economic circumstances changed in 2011 as a growing pool of echo boomers were able to land more jobs and were more likely to move into rental accommodation – exerting downward pressure on vacancy rates.

### Factors exerting upward pressure on vacancy rates

Other factors were less supportive of rental demand. Recent Ontario migratory patterns is one good example. Net migration into Ontario slowed sharply in 2011 largely due to lower immigration and to a lesser

extent due to migratory outflows to other provinces. Most immigrants rent upon immediate arrival into Ontario as they lack the credit and job history to qualify for mortgage financing. Meanwhile, Ontario continues to lose migrants to other provinces. After leading the Canadian economic recovery in 2009/2010, Ontario economic and job growth has lost pace versus growth in the rest of Canada so far in 2011. This encouraged more outmigration to western Canada by those in search of work. Less immigration and more migratory outflows to western provinces worked to dampen demand for rental accommodation.

On the supply side, higher condominium and conventional rental completions created competitive headwinds for existing rental accommodation. Uncertainty in global financial markets, low interest rates and stable residential housing markets are factors encouraging investor interest in residential real estate. Developers met this demand by launching new apartment projects in some major Ontario urban centres in recent years. Some projects geared to investors reached the completion phase in 2011. Condominiums are a form of competing rental supply for the higher end primary rental segment as investors subsequently lease these units out to prospective tenants. In addition, more conventional rental completions, particularly in markets such as Kingston, London and Greater Sudbury meant more competition to retain and attract tenants - exerting upward pressure on vacancies. On net, demand pressures were strong

<sup>1</sup> Based on privately-initiated rental apartments structures of three or more units.

enough to offset increasing headwinds from new supply – resulting in lower vacancy rates across most major Ontario markets.

### **Ontario rents grow in excess of provincial guidelines in 2011**

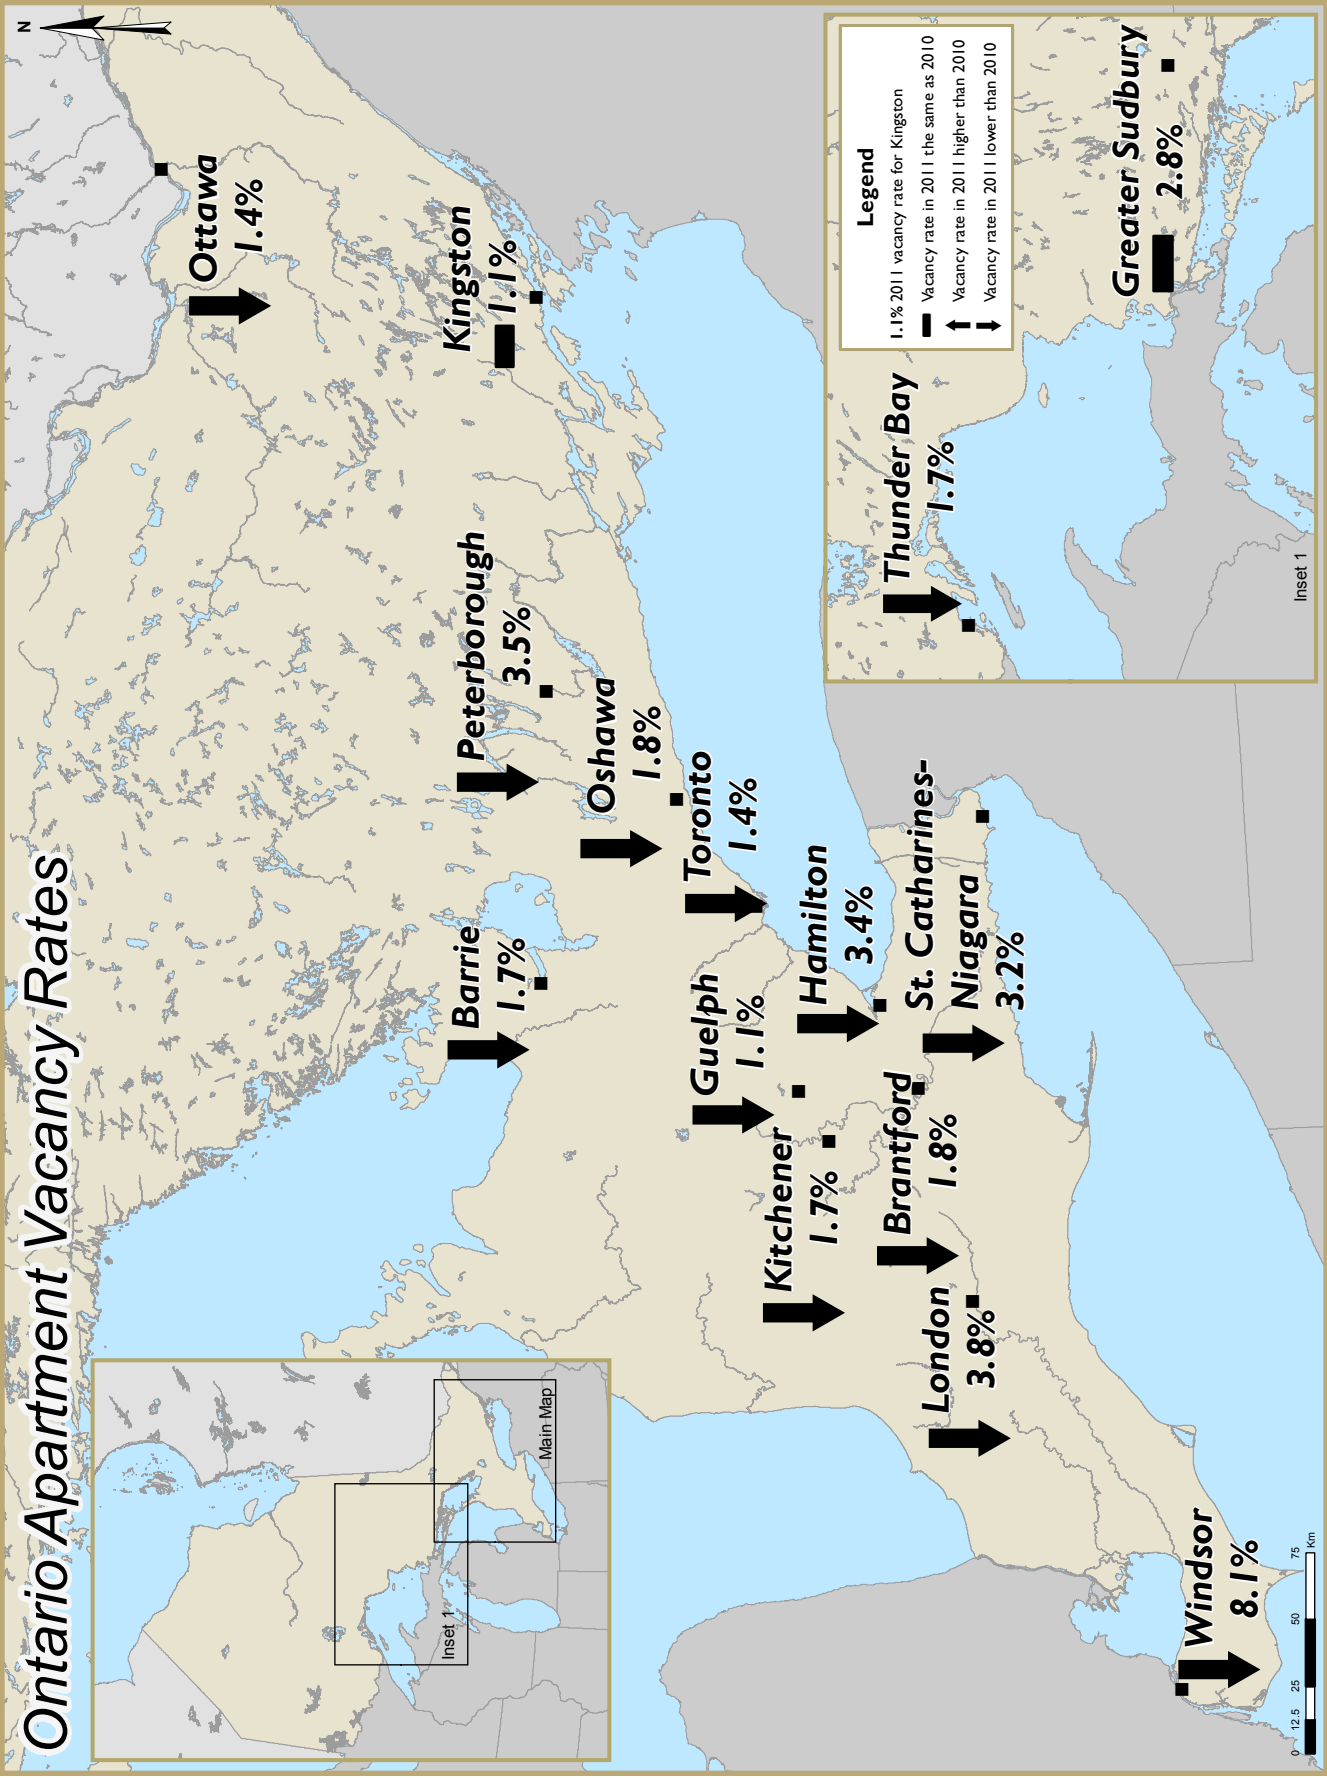

Apartment rents for 2-bedroom units that were common to both 2010 and

2011 fall surveys<sup>2</sup> rose by 1.8 per cent. This rate of increase in rents was generally in line with increases in 2010 but exceeded the 2011 Provincial Rent Review Guideline amount of 0.7 per cent for existing tenants. Units that experience turnover in Ontario are not subject to rent controls. Low Ontario vacancy rates supported stronger rent increases for those units

turning over. With more units turning over they were able to fetch increases in line with market rents – explaining above guideline increases.

---

<sup>2</sup> When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2010 and 2011 Fall rental market surveys, we can get a better indication of actual rent increases paid by most tenants.

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

<sup>1</sup>The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a - Excellent, b- Very good, c - Good, d - Fair (Use with Caution)

\*\* Data suppressed to protect confidentiality or data not statistically reliable.

++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

## TECHNICAL NOTE:

### ***Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):***

**Percentage Change of Average Rents (New and Existing Structures):** The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

**Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):** This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

## METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

## METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. Rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Winnipeg, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montréal, Ottawa, Québec, St. John's, Toronto, Winnipeg, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

## DEFINITIONS

**Availability:** A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

**Rent:** The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

**Rental Apartment Structure:** Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

**Rental Row (Townhouse) Structure:** Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

**Vacancy:** A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

### Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

### Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

### Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. A centre's median income is divided by the level of income required for a household to rent a median priced two-bedroom apartment using 30 per cent of income. The result is then multiplied by 100. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable. For years for which the median income is not available, CMHC has developed forecasts.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2009. CMHC has developed forecasts of median renter household income for 2010 and 2011. It should be noted that nominal values for both median rent and median incomes have been used to calculate the rental affordability indicator.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
