

RENTAL MARKET REPORT

Greater Toronto Area

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2015

Highlights

- The primary apartment vacancy rate remained unchanged at 1.6 per cent in 2015 from the previous year
- The condominium apartment vacancy rate edged up to 1.8 per cent
- The matched-sample average two-bedroom apartment rent increased by 3.3 per cent

Overview: Vacancy Rate Unchanged, Rents Up

The primary rental market indicators in the Greater Toronto Area (GTA) showed only minor changes according to the October 2015 rental market survey. The average purpose-built apartment vacancy rate¹ remained at 1.6 per cent in 2015 from the previous year. The availability rate in the GTA² (which captures the occupied units for which notice has been given in addition to vacant units) was also unchanged at 3.0 per cent. The average increase in rent for a fixed sample³ of two-bedroom units was 3.3 per cent in 2015, up from 2.7 per cent a year earlier.

Demand for purpose-built rental accommodation held steady and limited growth in supply this year was enough to keep the market from tightening further. Encouraged by lower mortgage financing costs some households moved into homeownership, while most households likely stayed in rental due to declines in affordability because of significant increases in home prices.

Growth in economic fundamentals helped to shift rental demand to high-end segments of the market such as newer purpose-built structures and newly completed condominium rentals. In fact, structures built after 2005 saw their vacancy rate drop to 1.6 per cent in 2015, compared to 3.4 per cent last year. Stronger labour market conditions have kept household formation robust. The

Figure 2

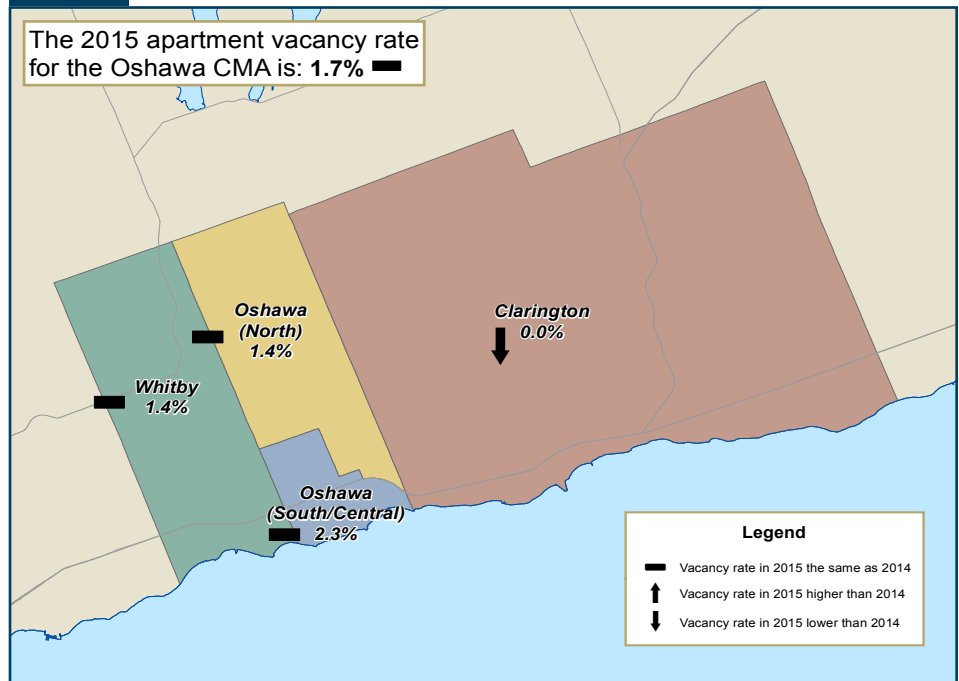

Figure 3

¹ Based on privately-initiated rental apartment structures of three or more units

² A rental unit is considered available if the unit is vacant, or the existing tenant has given or received official notice to move and a new tenant has not signed a lease. As the definition of availability includes vacancy, the availability rate will always be equal to or greater than the vacancy rate.

³ See Technical Note on p. 69 for an explanation of the fixed sample rent increase

unemployment rate in the Toronto Census Metropolitan Area (CMA) reached 7 per cent in the first three quarters of 2015, and was its lowest rate since 2009⁴. The average weekly earnings increased by 5 per cent over this same period, which was well above the general rate of inflation⁵. However, net migration to Toronto CMA at roughly 54,000 last year, was the lowest annual increase in many years, and remained less supportive of rental demand.

Consistent with previous years, most of the growth in the GTA's rental housing stock came in the form of rented condominiums. The number of condominiums rented out grew to 105,317 units in 2015 from 92,257 units in 2014. This increase in supply was enough to nudge the condominium vacancy rate up to 1.8 per cent in 2015 from 1.3 per cent last year. The overall demand for condominium rentals remained strong in the face of significant increases in its supply.

Submarket Analysis: Vacancy Rates Unchanged in the City of Toronto, but Decline in Surrounding Areas

According to the 2015 survey, the vacancy rates were highest for smaller apartment types. The average vacancy rate for one-bedroom units was 1.7 per, compared to 1.5 per cent for two-bedrooms and 1.3 per cent

Figure 4

for three-bedrooms. These rates by apartment type were unchanged from the October 2014 survey. Smaller purpose-built apartments likely faced more competition from the secondary rental market than larger units since most new condominium rentals were one and two-bedroom units.

Vacancy rates were highest for smaller apartment structures in the GTA. Smaller buildings with 3-5 units had the highest vacancy rate of 3.4 per cent, while those with 100-199 units had the lowest rate of 1.3 per cent. Notably, structures with 3-5 units had the second highest rents at \$1,361 for a two-bedroom unit, compared to an average of \$1,276 for a two-bedroom in all structure types. Those in buildings with 200+ units had the highest rent at \$1,377. Larger rental buildings tend to be in

convenient locations, offering more amenities and well managed.

City of Toronto

The average vacancy rate in Toronto Central (Zone 1) had no statistically significant change at 1.7 per cent in 2015. A large contingent of students enrolled in the downtown's post-secondary institutions upholds rental market demand in the city's core. Total student enrolments at the University of Toronto and Ryerson University grew by 1.9 per cent⁶ and 5.5 per cent⁷ respectively last year. In addition, the City of Toronto's downtown core has accounted for much of its job growth over the last few years⁸. This growth in student and employed populations increased the demand for private rental accommodation located within close proximity to work and school.

⁴ Statistics Canada

⁵ Statistics Canada

⁶ University of Toronto, Facts and Figures, November 1 2014

⁷ Ryerson University, Key Statistics, 2014

⁸ Toronto Employment Survey, City of Toronto, August 2015

Within the rest of the former City of Toronto, Toronto North (Zone 3) its vacancy rate climb slightly to 1.8 per cent in 2015 from 1.5 per cent last year. This neighbourhood faced modest competition from relatively more affordable rental accommodations in neighbouring areas such as Toronto West and East (Zones 4 and 2) that offered similar commutes to employers located downtown as well as subway access.

In the rest of the City of Toronto (Etobicoke, York, East York, Scarborough and North York: Zones 5-17), there was no statistically significant change in the overall vacancy rate. The exception being North York -North Central (Zone 16), which showed a decrease in vacancies to 1.2 per cent, which reversed last year's increase. These suburban purpose-built rentals appealed to those who were attracted to their larger sizes and more affordable rents.

Unsurprisingly, Toronto Central (Zone 1) commanded the highest rent with an average two-bedroom rent of \$1,900. The former City of Toronto had an average of \$1,651. Toronto Central's apartments were able to achieve the highest rent due its proximity to large employers located in downtown Toronto and post-secondary institutions. The shorter commute times compensated for higher rents in this area.

Suburban Areas

Lack of supply of purpose-built rental accommodation kept demand high in the areas surrounding the City of Toronto. The average vacancy rates in Peel and Halton Regions declined to 1.5 per cent and 1.3 per cent

respectively in 2015 from the previous year. These declines were a result of stronger demand in Mississauga South (Zone 18), Brampton West (Zone 21), Oakville, Milton and Halton Hills (Zones 23 and 29). York and Durham Regions showed no statistically significant change in vacancy rates from 2014. Rates in these two areas held at 1.6 per cent, in line with the GTA average.

Rents in the 905 regions were similar to those of the inner suburbs of the City of Toronto. The average two-bedroom rent was the highest in Halton Region at \$1,283, while Durham region offered the lowest average two-bedroom rent at \$1,042. The average two-bedroom rent in York and Peel Regions was \$1,262 and \$1,235 respectively.

Rents Grow Above Guideline

The average rent for a two-bedroom apartment in structures that were common to both the 2014 and 2015 surveys increased by 3.3 per cent in the GTA, up from 2.7 per cent in October 2014. This acceleration was in part due to a higher allowable provincial guideline⁹ increase for 2015 (0.8 per cent in 2014 vs. 1.6 per cent in 2015). As well, a sizable increase in the average weekly paycheck in Toronto CMA¹⁰ this year likely increased the rent that tenants were willing to pay.

The gap between the guideline and the fixed sample increase points to a higher level of tenant turnover in 2015. An availability rate of 3.0 per cent combined with a low average vacancy rate of 1.6 per cent suggested that units rented easily without being vacant for too long. Thus, market

rents were able to climb faster than the guideline for new tenants. On a sub-market basis, fixed sample rent increases ranged from a low of 1.7 per cent for the average two-bedroom apartment in Durham Region, to a high of 3.5 per cent in the City of Toronto.

Supply and Demand Factors: No Significant Increases in Primary Rental Supply

Supply changes did not play a significant role in influencing primary rental market conditions in 2015. New purpose-built rental apartment completions in the Toronto CMA in 2015 remained on par with 2014. While 1,118 rental units reached completion over the 12 months ending June 30, 2015, the cut-off point for the survey, the rental universe increased marginally by 0.2 per cent or 472 units. This was due to some of the existing rental units being pulled from the universe for reasons such as demolition, renovations and conversions to ownership. However, the fact that vacancy rates for rental apartments remained low in an environment of growing rental stock, in both the primary and secondary rental markets, signalled strong rental demand.

Low vacancy rates and an aging rental stock have encouraged new investment in purpose-built rental units as evidenced by a boost in purpose-built rental starts recently. Over the past 10 years, the average annual rate of completion of purpose-

⁹ Ontario Ministry of Municipal Affairs and Housing, 2015 Rent Increase Guideline, retrieved from <http://news.ontario.ca/mah/en/2014/06/2015-rent-increase-guideline.html> on Dec. 7, 2015

¹⁰ Statistics Canada's Survey of Employment, Payrolls and Hours, October 2015

built rental apartments was roughly 1,300 units while the average number of units under construction was around 2,500. Since the end of 2014, rental starts have increased and units under construction reached a 22-year high, at 4,168 units as of September 2015. As a result, more rental completions will ensue in the immediate future and add to the rental supply.

Millennials Keep Rental Demand Strong

Young adults were a source of strength in the rental market over the past few years. The millennial cohort, made up of people born from the early 1980s to the early 2000s represented almost 30 per cent of the GTA population (or close to two million people) in 2015¹¹. Furthermore, the older segment of this population that were in their mid-20s to mid-30s grew at a stronger pace compared to the general population in Toronto. They are now approaching the age when they start or advance in their careers, live on their own or start a family, and naturally have a great influence on both ownership and rental housing markets.

The overall Toronto CMA labour market conditions improved in 2015, with the unemployment rate declining to 7.2 per cent¹² during first three quarters, the lowest level in eight years. Tight labour market conditions boosted income growth to five per cent over the same period. The creation of new full-time jobs drove employment growth. Growth in full-time jobs is a good gauge of rental demand, as full time jobs provide the financial ability to pay for rental accommodation.

The younger millennials, aged 15 to 24 years, also benefited from tighter labour market conditions but their impact on the rental market was relatively modest. The household formation of this age group was low and has been declining over the years. According to Statistics Canada, there was a prolonged decline in youth labour force participation among those aged 15 to 24, partly as a result of higher number of young people pursuing full-time studies in response to softening labour market conditions in the late 2000s. The improvement in the unemployment rate among youth is partly due to fewer individuals at this age looking for a job.

The older millennials in their mid-20s and 30s, on the other hand, had a positive impact on the rental market in the Toronto CMA. Over the first three quarters of 2015, full-time employment for individuals aged 25 to 44 rose 3.6 per cent compared to the same period a year earlier. The unemployment rate for this age group dropped to 6.3 per cent from 7.5 per cent in 2014. With ownership costs in Toronto becoming beyond the reach for more young adults, positive employment trends have provided even greater support for rental demand.

Renter Movement into Homeownership Slows

Rapidly rising house prices across the GTA prompted many potential first-time homebuyers to delay entering into homeownership and either enter or remain in rental accommodation for longer. Despite the fact that mortgage rates were at record low levels, the cost gap between the average carrying cost and the average rent (for both primary and secondary

rental units) in the GTA had widened further (see Figure 6).

Some renter households also put their home purchasing decisions on hold until they built up sufficient down payments or improved their employment conditions to facilitate

¹¹ Ontario Ministry of Finance

¹² Statistics Canada

the move. Furthermore, with more family households renting, demand for larger apartments rose in 2015. The vacancy rate was the lowest for three plus bedroom apartments, followed by two bedroom units in 2015.

Migration Trends Are Less Supportive of Rental Market

The Toronto CMA continued to be the greatest beneficiary of immigration into Canada. Over the past few years, the number of immigrants moving to Toronto was edging lower and while immigrants continued to support the rental market, it was to a lesser degree. Typically, immigrants rent first upon settling down in order to gain meaningful employment and build a credit history before entering homeownership. According to Statistics Canada's 2011 National Household Survey, nearly 62% of households who immigrated to the Toronto CMA between 2006 and 2011 were renters.

Because of rising cost of homeownership in Toronto, there was also a stronger outflow of migrants to other Ontario cities with more favourable house prices.

The number of temporary residents was edging lower over the past few years and released some pressure off the rental market as well. A substantial number of non-permanent residents in Toronto arrive for work or study purposes. The vast majority of these individuals typically rent, at least in the short term.

Renters Are Looking For Quality Rental Accommodation

Newer and therefore more expensive purpose-built rental properties tend to compete with condominium rentals, as well as the ownership market, as the housing payment premium to own versus rent is the smallest for these units. In 2015, the vacancy rate for primary rental units commanding rents over \$1,200 remained above the market average. It suggested that some rental households were using improved employment conditions and increased incomes to trade up into the condominium market. A rising number of well established, young professional renters, who favoured condominiums over older purpose-built rental accommodations, prompted the movement. The record high number of brand new condominium apartments completed in 2015, many of which were available

for rent, facilitated the move.

Secondary Rental Market

The secondary rental market survey counts rental units that were not part of the primary or purpose-built rental market. Condominiums rented out by investors represent the single largest component of the GTA's secondary rental market. This year, there were an estimated 105,317 rental condominium apartments in the GTA. The survey universe for rental condominium units increased in 2015, primarily as result of higher condominium completions. The rest of the secondary market comprised of single-detached, semi-detached, row homes along with duplexes and accessory suites (many of which are basement apartments within single or semi-detached homes). The average total rent for these secondary units remained stable compared to the previous year.

Figure 5

Supply Pressures Eased Condo Vacancy Rate

The GTA condominium vacancy rate rose to 1.8 per cent in 2015 from 1.3 per cent in 2014, primarily due to higher supply. The supply of rental condominiums increased by 14 per cent (or over 13,000 units) in 2015 from the previous year but demand increased slightly faster, as measured by the increase in the share of rental condominium apartments to 30.1 per cent in 2015 from 28.9 in the previous year. Despite that fact that renters would have to pay on average 50.0 per cent more to rent a condominium unit compared to a purpose-built rental unit, newer finishes, better amenities and locations of many rental condominiums continued to attract renters. In the absence of abundant supply of new units in the primary market, rental condominiums were able to match the demand for modern and well-equipped rental accommodation from the millennial generation.

At the time of this survey, condominium apartment completions exceeded 30,000 units, surpassing the historical five-year annual average of about 15,000 units. Of those new units ready for occupancy and added to the condominium universe, 51.0 per cent were leased compared to 50 per cent in the previous year. Historically low vacancy rates in the condominium market appeared to have induced more condominium owners to lease out their properties. The City of Toronto had the highest share of units in rental at 32.4 per cent in 2015 compared to 31.3 per cent in 2014 and consistent with the trend of owner-occupied units shifting to rental over the past few years.

In spite of the increase in the condominium vacancy rate, there was no statistically significant change in the fixed-sample rent for an average condominium apartment in 2015 (which was \$1,656) from the previous year. Property owners had limited room to increase rents because of competition from increased supply of newer rental units entering the market.

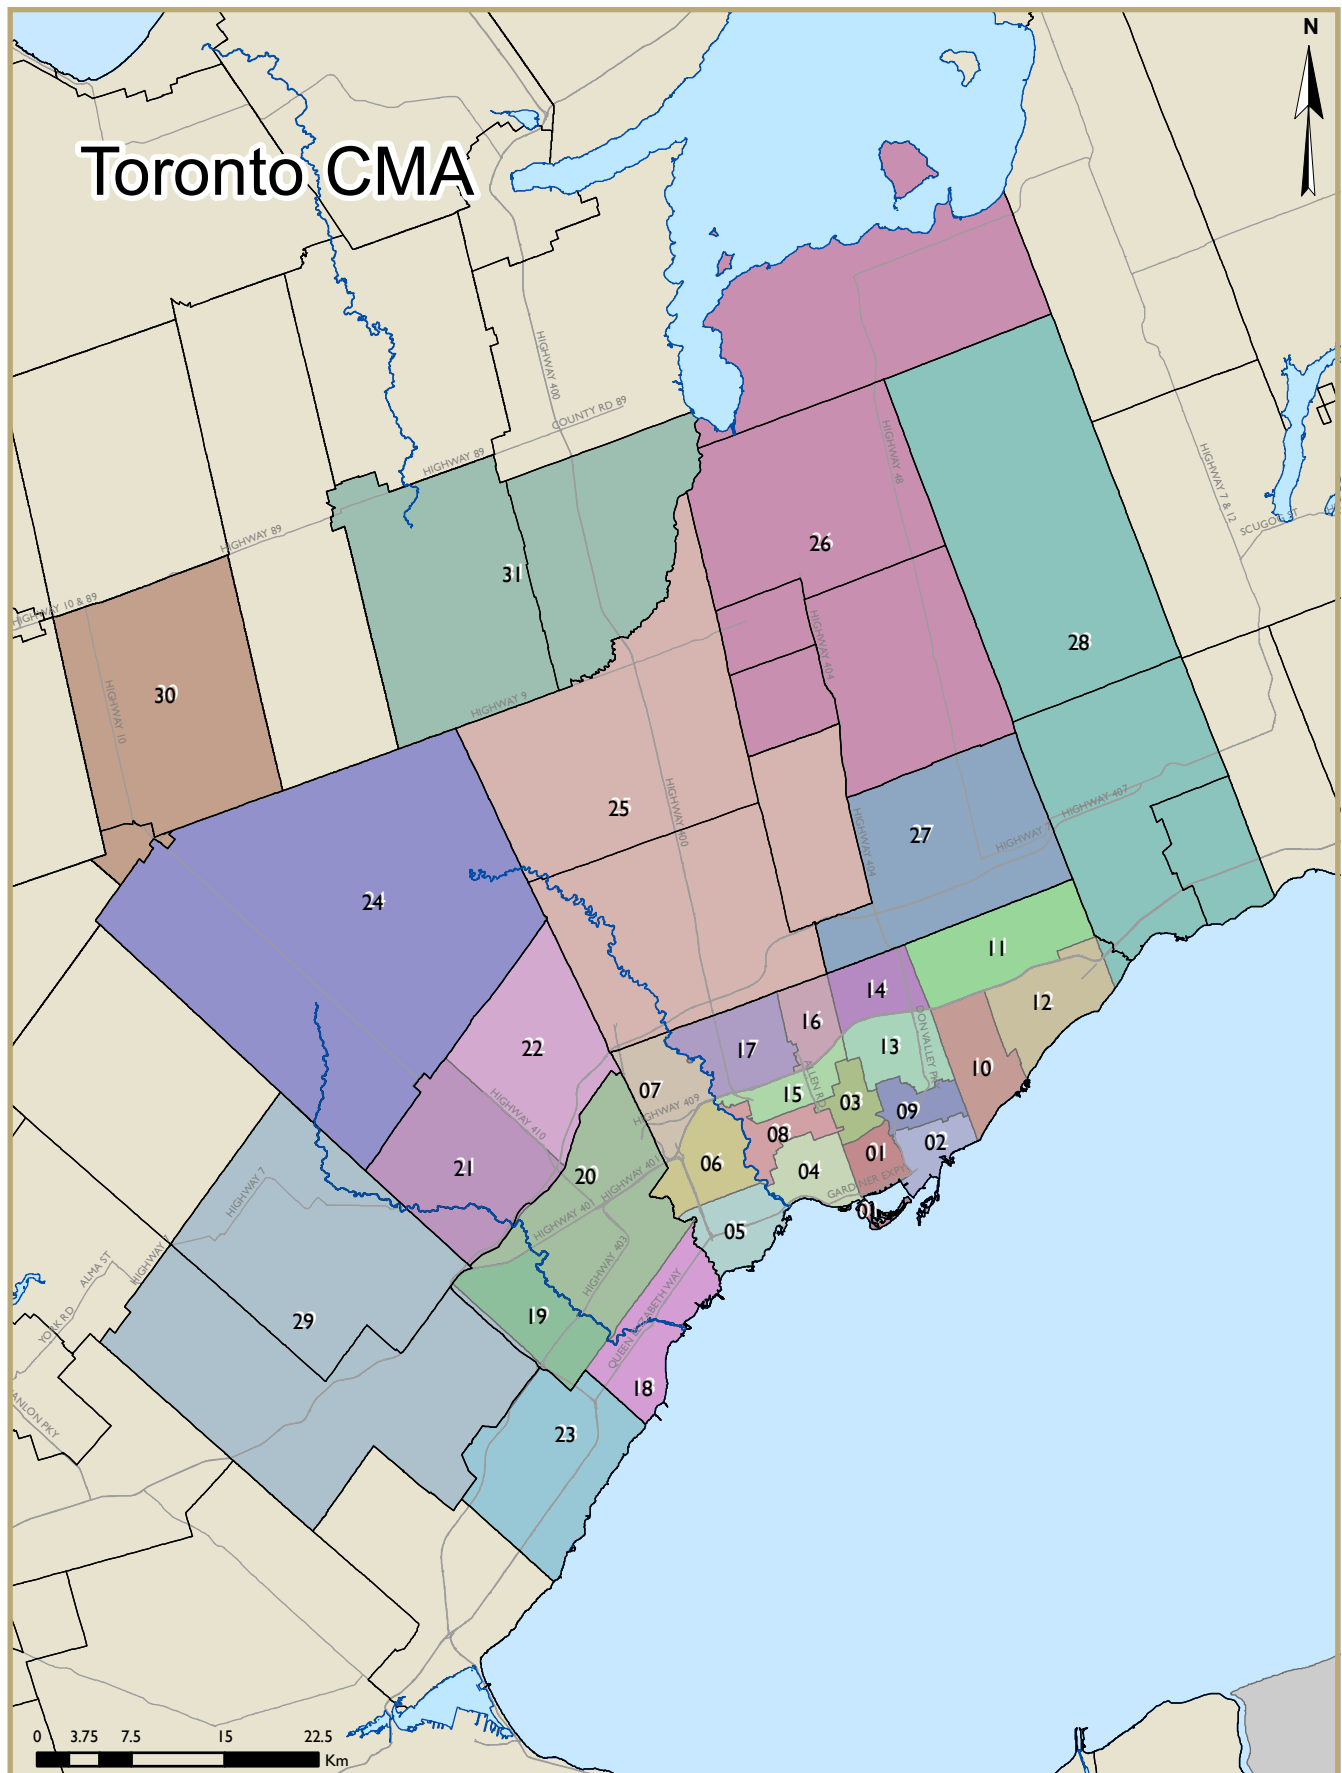

Growth in Rental Condominiums Higher in Suburbs

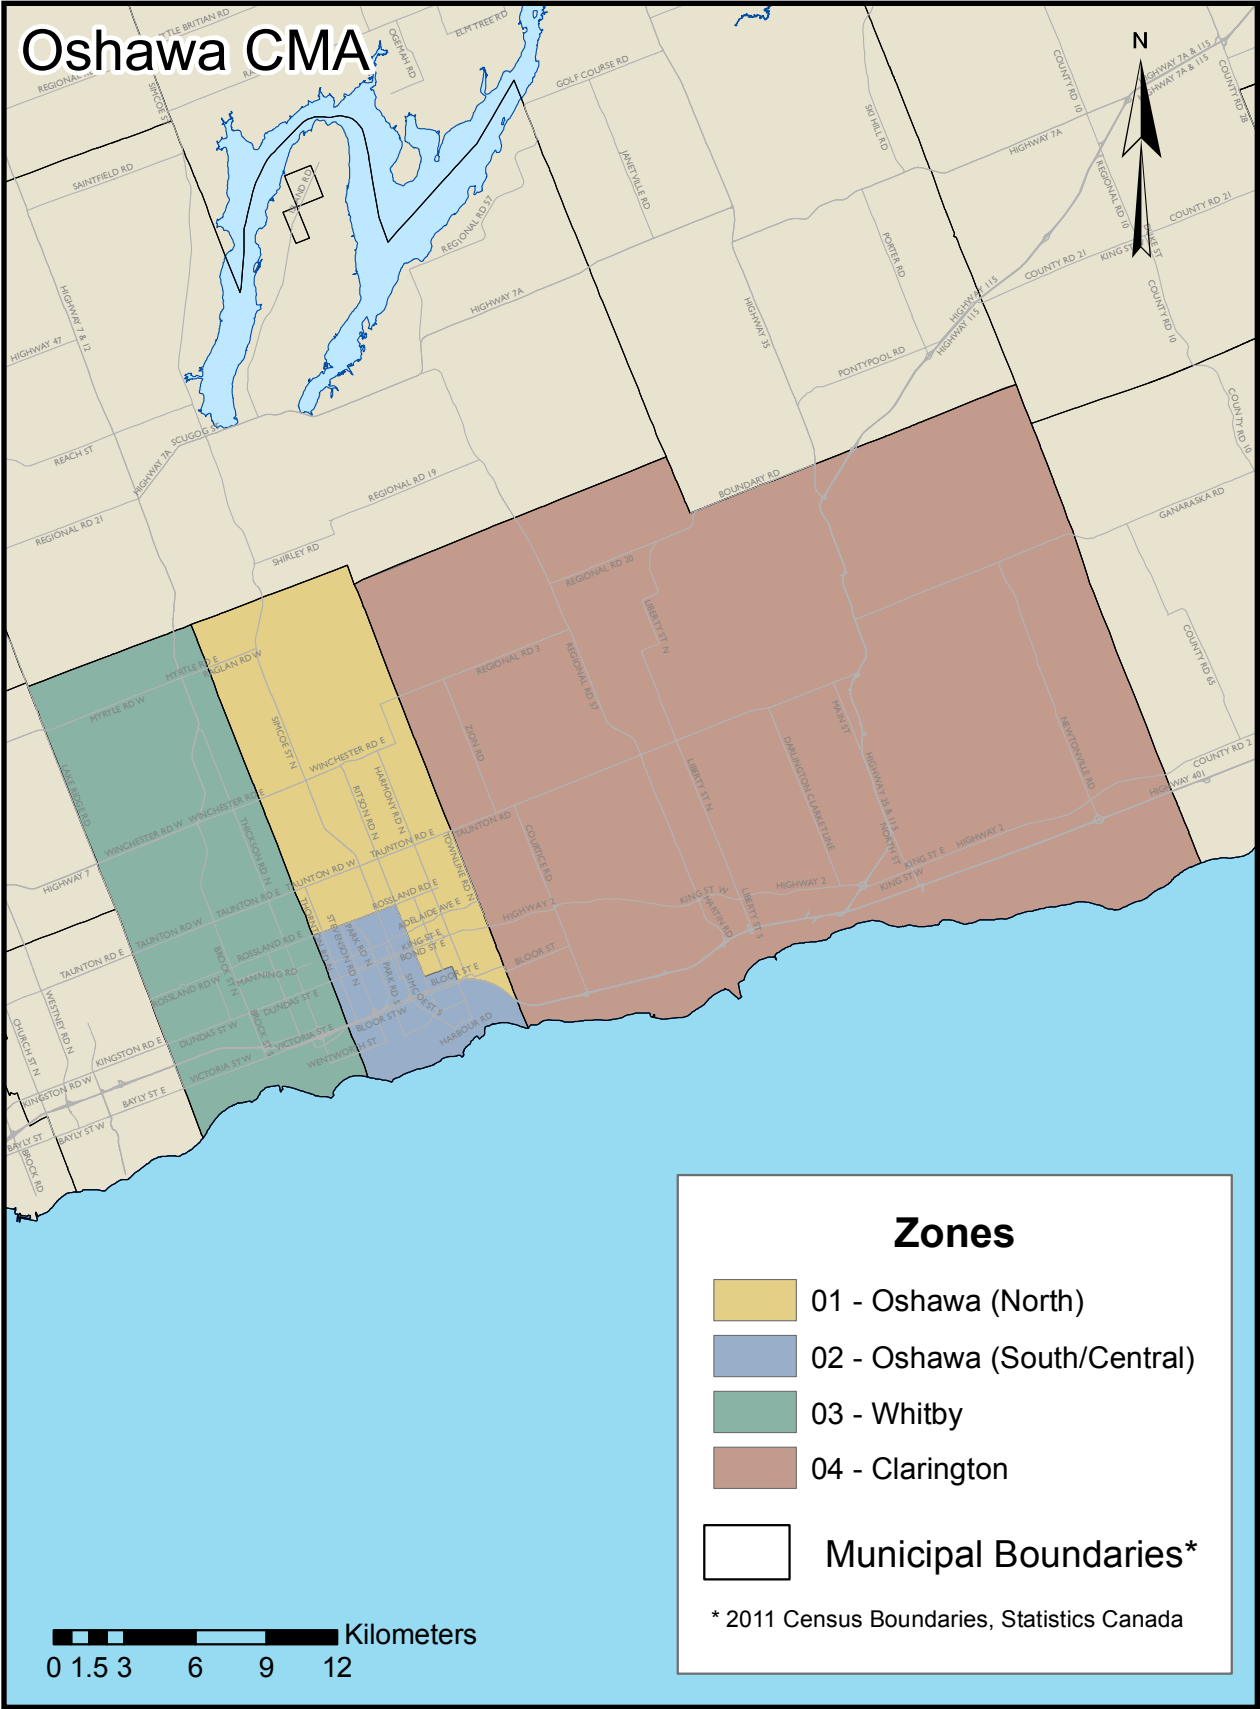

Although the majority of new supply of condominium rentals was concentrated within Toronto Centre and Toronto North, the growth in new supply was higher in Halton and York Regions respectively. Despite supply increases in these areas, the average vacancy rate in Halton Region fell to 1.3 per cent in 2015 from the previous year and there

was no statistically significant change in the York Region's vacancy rate of 1.6 per cent in 2015 compared to the previous year. Most rental accommodation available in the suburbs tends to be in the form of low-rise housing charging higher rents or the existing rental stock in the primary rental market, which is older and cannot compete well with newer units. High demand and low supply for quality affordable rental accommodation typically characterise suburban rental markets. Therefore, strong demand from potential renters was easily able to absorb any additional supply.

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while – indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents in the following CMAs: Calgary, Edmonton, Montréal, Ottawa, Québec, Toronto, Vancouver, Victoria and Winnipeg.
- A Condominium Apartment Vacancy Survey to collect vacancy information in the following CMAs: Calgary, Edmonton, Gatineau, Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.
