HOUSING MARKET INFORMATION

RENTAL MARKET REPORT

Ottawa-Gatineau^I CMA (Ontario)

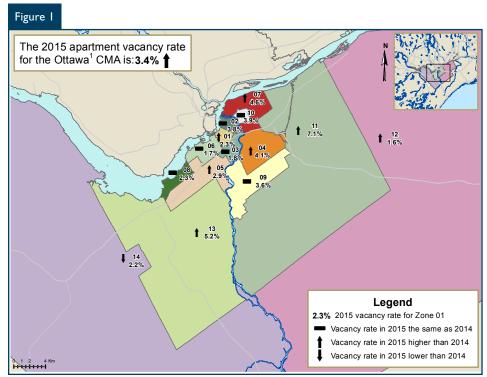

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2015

Highlights

- The vacancy rate² in Ottawa rose to 3.4 per cent in 2015 from 2.6 per cent in 2014.
- The average fixed sample³ rent for two bedroom apartments increased 3.1 per cent from 2014.
- Faster growth in supply than demand of rental units pushed apartment vacancies up in 2015.

- Ontario part of Ottawa-Gatineau CMA
- ² The vacancy rate is based on privately-initiated rental apartment structures of three or more units.
- ³ Fixed sample refers to a sample common to the October 2014 and October 2015 surveys. When comparing year-over-year average rents, the age of the building needs to be taken into consideration because rents in newly-built structures tend to be higher than in existing buildings. By comparing rents for units that are common to both 2014 and 2015 Fall Rental Market Surveys, we can get a better indication of actual rent increases paid by most tenants.

Overview: Vacancies and Rents in Ottawa CMA

The rental market survey conducted in October 2015 by Canada Mortgage and Housing Corporation (CMHC) revealed that the average vacancy rate for the Ottawa Census Metropolitan Area (CMA) was 3.4 per cent, up from 2.6 per cent last year. Ottawa's vacancy rate was the highest since 2004 and came in higher than the provincial average of 2.4 per cent. The growth in supply outpaced the growth in demand, especially among one- and two-bedroom units, driving up the vacancy rate. The availability4 rate increased for all bedroom count units, although three-bedroom units continued to have the highest availability rates in keeping with the usual rental market trends.

Average fixed sample rents went up compared to last year for all bedroom counts, with the largest increases for one- and two-bedroom units at 3.0 and 3.1 per cent, respectively. Following three years of rent increases below the Ontario guideline, landlords raised rents at a strong rate this year. Rent increases had not hit the three per cent mark since 2010 when rents were up 3.5 per cent. For all bedroom types, with the exception of three-bedroom units, the average fixed sample rent increased above the rate of inflation. exceeding the Rent Guideline increase of 1.6 per cent for 2015 in Ontario.

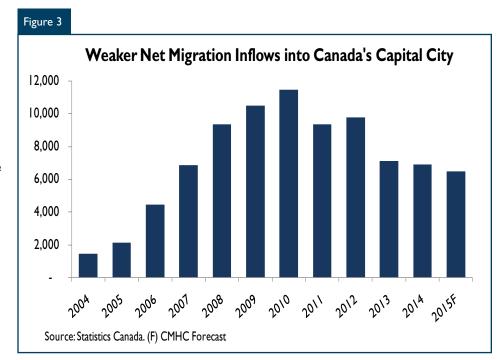

Rental unit offerings in Ottawa also include purpose-built row houses; these represent II per cent of the overall primary rental market. The vacancy rate on these units inched only slightly higher this October to 4.1 per cent from 4.0 per cent in 2014. The average fixed sample rent

for all bedroom count townhouses rose by 1.8 per cent, while it increased by 2.0 per cent for the benchmark two-bedroom townhouse units. The row house universe

declined slightly from last year by 54 units.

The completion of a large number of new purpose-built units this year, as well as an increase in condo

⁴ A rental unit is considered available if the unit is vacant, or the existing tenant has given or received official notice to move and a new tenant has not signed a lease. As the definition of availability includes vacancy, the availability rate will always be equal or greater than the vacancy rate.

offerings for rent increased rental supply. On the other hand muted employment growth for the younger age groups, and weaker migration into the CMA were less supportive for rental market demand. In addition, historically low mortgage rates may have encouraged some first-time homebuyer households with stable employment to jump into homeownership and leave their rental accommodations. Together, these supply and demand factors led to a rise in the vacancy rate.

Submarket Results: Higher Vacancies in Most Areas, Especially in Eastern Areas

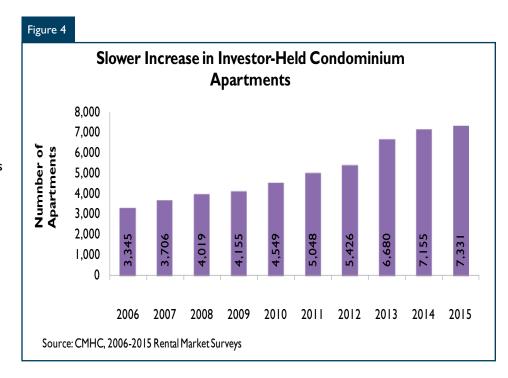

The vacancy rate for all bedroom types was highest in Gloucester North/Orleans at 7.1 per cent up from 1.2 per cent last year, followed by Nepean at 5.2 per cent up from 3.6 per cent last year. The high vacancy rate in Gloucester North/ Orleans was driven by two- and three-bedroom units, for which vacancy rates were 8.1 and 18.1 per cent, respectively. The high vacancy rate in this area was due to high vacancies in a few area buildings. Nepean's rise in vacancy rate was due to a rise in the vacancy rate for one- and two-bedroom units. The overall vacancy rate went up in the downtown core to 2.3 per cent from 1.7 per cent last year, but the area continued to have one of the tighter rates in the CMA as the core remains a sought-after area for renters.

Looking at vacancies by the age of the structures, units in structures built between 1990 and 2004 had the lowest vacancy rates this year at 2.3 per cent. Vacancy rates went up significantly for units in buildings built between the years 1940-1959, 1960-1974, and 1975-1989. The vacancy rate went down for one-bedroom units built after 2005 to 2.0 from 5.6

per cent, as newer buildings generally offer more amenities than older buildings.

The highest average rent for twobedroom apartments was observed in Western Ottawa and Surrounding areas at \$1,453, driven by much higher one bedroom rents than in all other areas. Western Ottawa includes the Kanata area where incomes are slightly higher than other zones in Ottawa. Kanata has seen growing housing market activity in terms of new construction and existing sales; since it is both a residential and a commercial area at the same time, it provides more opportunities to live and work in the area. The lowest average rent for two-bedroom apartments at \$932 was observed in Eastern Ottawa and Surrounding areas, as this is a purely residential area with not much commercial development, so that demand for rentals is not usually as strong. The highest rent for threebedroom units was observed in Sandy Hill/Lowertown as this area has high student demand, while supply has remained stable since last year.

The largest fixed sample rent increase in the CMA was observed for twobedroom units, where rents rose by 3.1 per cent compared to 2014. By area, the largest common sample rent increase was observed for Carlington/ Iris at 4.1 per cent, followed by Westboro S./Hampton Partk/ Britania at 3.9 per cent. Looking at rent increases by bedroom count, Vanier had the highest increase in average rents at 4.9 per cent for bachelor units. Glebe/Old Ottawa South saw the largest increase in rents for one-bedroom units at 4.4 per cent. Westboro S/Hampton Park/Britania saw the largest rent increase for two-bedroom units at 4.7 per cent. Most of the areas that witnessed the greatest rent increases this year had either witnessed a rent decline or no growth in rents in the previous year. In addition, some of the aforementioned areas, such as Westboro, have seen greater development in recent years, and have been rising in popularity for renters and homeowners alike due to increased amenities. Alta Vista had the highest increase in rents among three-bedroom units at 4.1 per cent.

Supply and Demand Factors: Stronger Supply and Weaker Demand this year

The rise in rents this year despite the higher vacancy rate was more or less in response to lower rent increases in previous years rather than demand driven. This year, 792 net units were added to the survey universe so that the total apartment universe reached 60,878. The majority of apartment units surveyed were one-bedroom units, at 47 per cent, while two-bedroom units represented 40 per cent of the total survey universe.

There were 6715 new completed purpose-built rental units added to the survey this year, which is 85 per cent of the net units added to the primary rental universe this year. It also represents 60 per cent of the total new supply brought to the primary rental market in the past five years. Ottawa's apartment rental market is also influenced by condominium units offered for rent by investors, which also compete for renters⁶. This year, the number of condominiums offered for rent increased by 176 units to 7,331. Adding together the purposebuilt apartment units added to the primary rental universe and the new condominium units offered for rent, Ottawa's rental apartment supply rose by 968 units, while demand rose by about 391 units, pressuring the vacancy rate up.

Demand for rental accommodations was weak, as full-time employment for the 15-24 age was down 16 per cent since last year's survey. A rising

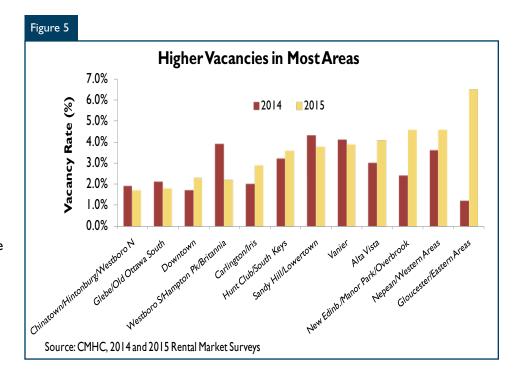

number of members of this age group are staying longer in parental homes until the general trend in their employment improves. In addition, the 25-44 age group witnessed full-time employment gains since last year's survey. Some members of this age group may have been persuaded by historically low mortgage rates to jump into homeownership, putting some upward pressure on the vacancy and availability rates.

Other important groups for rental demand are immigrants, international students and temporary workers. About 70 per cent of recent immigrant households rent their accommodations, and about 54 per cent of them choose apartments. Migration to the Ottawa CMA has provided less demand to the rental market in recent years, as the number of immigrants has steadily decreased.

Ottawa received an estimated 5,580 immigrants in 2014, which works out to about 1,800 households (3.3 persons per household). This number is down from 2013 and down from the average over the previous five years. As for international students in Ottawa, their number was up for the 2014-2015 academic year. Moreover, International enrolment is up for the three post-secondary educational institutions in Ottawa this year, supporting demand for rental accommodations.

Secondary Market

The number of condos offered for rent increased to 7,331 from 7,155 in 2014, for a modest increase of 176 units offered for rent. 2014 had seen 475 additional units offered for rent over the 2013 level. Meanwhile, the vacancy rate for the rental

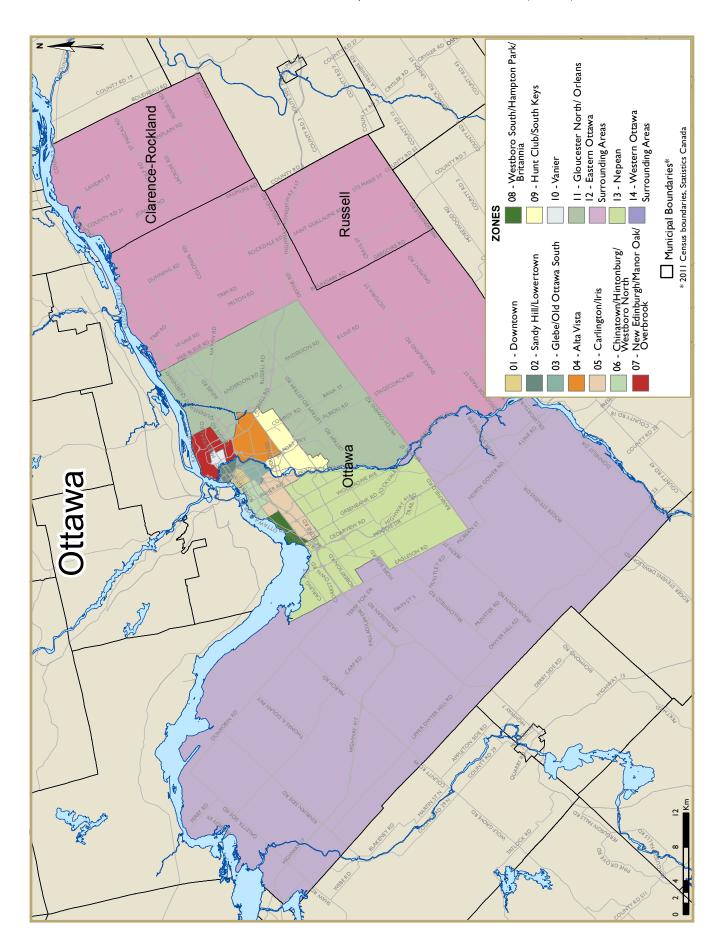

⁵ Only units completed 3 months prior to the CMHC Rental Market Survey are included in the survey, so new supply included in the October 2015 survey (671 units) includes units completed as of July 2014 to June 2015.

⁶ An important caveat to make is that there is likely more direct competition between condominium units and purpose-built units in building structures of similar ages.

condominiums went up to 2.6 per cent from 1.7 per cent in 2014, driven by an increase in the vacancy rate in the outer suburbs from 0.7 per cent in 2014 to 3.6 per cent. This means that overall condominium rental demand increased by just over 100 units. Therefore, similar to the purpose-built segment of the rental market, supply has outpaced demand in the condominium rental market. The ample supply of condominiums offered for rent in Ottawa has also meant that the average rent for a two-bedroom condominium unit declined to \$1,330 this year compared to \$1,430 in 2014. Condos are competing with purpose-built units renting at a similar average rent. The average vacancy rate of purposebuilt rentals with rents between \$1,200 and \$1,349 is 5.2 per cent for all bedroom types, compared to 2.6 per cent for all condos.

The number of estimated households in other secondary rental units such as single-detached homes, semidetached, row and duplex units as well as other primary accessory suites, increased by just over 2,600 households. These other secondary rental units have more space, as there are no bachelor or one-bedroom suites in this rental category. The average rent on both two- and threebedroom other secondary market units came in lower than for purposebuilt units of same bedroom count, as such units are generally located in more suburban areas compared to purpose-built units.

- ** Data suppressed to protect confidentiality or data not statistically reliable.
- ++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

¹ The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

- a Excellent, b- Very good, c Good, d Fair (Use with Caution)
- ** Data suppressed to protect confidentiality or data not statistically reliable.
- ++ Change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0).
 - No units exist in the universe for this category n/a: Not applicable

 - No units exist in the universe for this category n/a: Not applicable

1 indicates the year-over-year change is a statistically significant increase

- ↓ indicates the change is a statistically significant decrease
- indicates that the change is not statistically significant

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in the previous year vs. \$550 in current survey represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data for all sampled structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC is constantly reviewing the Universe of rental structures in the rental market Universe to ensure that it is as complete as possible. Every year, any newly completed rental structures with at least 3 rental units are added to the Universe. In addition to this, CMHC undertakes comprehensive reviews by comparing the Universe listing to other sources of data to ensure that the list of structures is as complete as possible.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the previous year and the current Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

Use caution when comparing changes in statistics from one year to the next. Even if there is a year over year change, it is not necessarily a statistically significant change. These tables include indicators to help interpret changes. ↑ indicates the year-over-year change is a statistically significant increase, ↓ indicates the year-over-year change is a statistically significant decrease, while − indicates that the effective sample does not allow one to interpret any year-over-year change as being statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in late summer and early fall to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS – rented single-detached homes, semi-detached (double) homes, rented freehold row/townhomes, rented duplex apartments (i.e., one-above-other), rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type), rented condominiums (can be any dwelling type but are primarily apartments), and one or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents in the following CMAs: Abbotsford, Barrie, Calgary, Edmonton, Halifax, Hamilton, Kelowna, Montréal, Ottawa, Québec, Regina, Saskatoon, St. Catharines-Niagara, St. John's, Toronto, Vancouver, Victoria, Windsor and Winnipeg.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents in the following CMAs: Calgary, Edmonton, Montréal, Ottawa, Québec, Toronto, Vancouver, Victoria and Winnipeg.
- A Condominium Apartment Vacancy Survey to collect vacancy information in the following CMAs: Calgary, Edmonton, Gatineau,
 Hamilton, Kelowna, Kitchener, London, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, Victoria and Winnipeg.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the property management company or condominium (strata) board, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in late summer and early fall, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates from the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability.

Every year CMHC reviews the method of estimation for Household Rent Survey, which may result in some changes to previously published estimates. All statistics in this report are reflective of the new method of estimation.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

Data presented is based on Statistics Canada's 2011 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for almost 70 years.

CMHC helps Canadians meet their housing needs. As Canada's authority on housing, we contribute to the stability of the housing market and financial system, provide support for Canadians in housing need, and offer objective housing research and information to Canadian governments, consumers and the housing industry. Prudent risk management, strong corporate governance and transparency are cornerstones of our operations.

For more information, visit our website at www.cmhc.ca or follow us on Twitter, YouTube, LinkedIn and Facebook.

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.

Outside Canada call 613-748-2003 or fax to 613-748-2016.

This permission consists of the right to use the content for general reference purposes in written analyses and in the reporting of results, conclusions, and forecasts including the citation of limited amounts of supporting data extracted from this publication. Reasonable and limited rights of use are also permitted in commercial publications subject to the above criteria, and CMHC's right to request that such use be discontinued for any reason.

Any use of the publication's content must include the source of the information, including statistical data, acknowledged as follows:

Source: CMHC (or "Adapted from CMHC," if appropriate), name of product, year and date of publication issue.

Other than as outlined above, the content of the publication cannot be reproduced or transmitted to any person or, if acquired by an organization, to users outside the organization. Placing the publication, in whole or part, on a website accessible to the public or on any website accessible to persons not directly employed by the organization is not permitted. To use the content of any CMHC Market Analysis publication for any purpose other than the general reference purposes set out above or to request permission to reproduce large portions of, or entire CMHC Market Analysis publications, please complete the CMHC Copyright request form and email it to CMHC's Canadian Housing Information Centre at chic@cmhc.ca. For permission, please provide CHIC with the following information: Publication's name, year and date of issue.

Without limiting the generality of the foregoing, no portion of the content may be translated from English or French into any other language without the prior written permission of Canada Mortgage and Housing Corporation.

The information, analyses and opinions contained in this publication are based on various sources believed to be reliable, but their accuracy cannot be guaranteed. The information, analyses and opinions shall not be taken as representations for which Canada Mortgage and Housing Corporation or any of its employees shall incur responsibility.
